The Fraser River Panel met Friday, August 7 to receive an update on the migration of the Fraser sockeye runs and review the status of migration conditions in the Fraser River watershed.

The run-size estimate of 32,000 Early Stuart sockeye was unchanged at the meeting today. At the meeting today the Fraser River Panel approved a run-size estimate of 424,000 Early Summer sockeye with a 50% marine timing through Area 20 of August 1. Assessments of Summer-run sockeye abundance are ongoing and a run-size estimate will be available after their peak migration through marine areas has occurred.

On August 6, the Fraser River water discharge at Hope was 2,530 cms, which is approximately 36% lower than average for this date. The temperature of the Fraser River at Qualark Creek on August 6 was 18.7 °C, which is 0.7 °C higher than average for this date. Fraser River discharge levels and water temperatures will be monitored closely to determine if specific management actions are required during the in-river migratory period to help achieve sockeye escapement goals.

The Panel announced the following regulations for Commercial salmon fisheries in Panel Area waters:
