EXECUTIVE SUMMARY

This report reviews: 1) catch, effort, and management actions in the 1991 Northern Boundary Area pink, chum, and sockeye salmon fisheries of southern Southeast Alaska Districts 101 to 106 and northern British Columbia Areas 1, 3, 4, and 5; 2) management performance relative to Treaty requirements; 3) historical catches and escapements; and 4) preliminary 1992 expectations and fishing plans.

Returns of pink, sockeye, and coho salmon were generally strong in the Northern Boundary Area in 1991. The catch of 43.4 million pink salmon in southern Southeast Alaska was the third highest since Statehood (1959). A record 9.3 million pink salmon were harvested in Canadian Area 3 and the 2.3 million pink salmon harvested in Area 4 was the largest since 1957. Escapement goals for pink salmon were met or exceeded in most areas. In southern Southeast Alaska catches of sockeye, coho, and chum salmon were about twice the 1960 to 1990 average. In northern British Columbia the catch of sockeye was above the 1973 to 1990 average in all areas, coho catches were about average, and chum catches were below average. Escapement goals were met for sockeye salmon in the Nass and Skeena Rivers. Escapements of summer chum salmon were poor on both sides of the border.

The Pacific Salmon Treaty limits the Alaska District 104 (Noyes Island) purse seine fishery to a four-year total catch (1990 to 1993) of 480,000 sockeye salmon prior to Statistical Week 31. Under terms of the agreement, when the annual catch reaches 160,000 sockeye salmon, no further daily fishing periods are allowed prior to week 31. The 1991 sockeye salmon harvest in District 104 prior to week 31 was 98,583 fish. Combined with last years 169,943, a total of 268,526 sockeye salmon have been caught. This leaves 211,474 to catch over the next two years to stay within the 480,000 pre-Week 31 sockeye limit for 1990 to 1993.

In the Alaska District 101-11 (Tree Point) drift gill net fishery, the catch of sockeye salmon since 1985 has been limited to an annual average of 130,000 by the Pacific Salmon Treaty. Catch of sockeye salmon in 1991 was 131,487, bringing the 1985 to 1991 average to 129,154.

Under the Pacific Salmon Treaty the outside portions of Canadian Statistical Areas 3 and 5 are to be managed such that an average annual pink harvest of 900,000 fish is achieved. In 1991, 5,724,069 pink salmon were harvested in Management Units 3 (1-4) and 5-11 combined. The current average annual pink harvest from 1985 to 1991 in the Treaty area is 2,046,023.

The Area 1 pink troll fishery is managed to an annual ceiling of 1.95 million pink salmon with a cumulative ceiling of 5.125 million pink

salmon for the period 1990 to 1993. In addition, the area adjacent to the Canada-U.S. border in the northern portion of Area 1 (A-B line area) closes to pink retention if the pink catch reaches 300,000 in this area, or by July 22, should this sub-ceiling not be met. The pink catch in the A-B line area reached only 71,620 and closed to pink retention July 22. The catch in this area was estimated to be 71,620 pink salmon. Preliminary saleslips indicate a total Area 1 troll catch of 1.59 million pink salmon.

Moderate returns are forecast for Northern Boundary Area pink salmon in 1992. Alaska Department of Fish and Game's preliminary forecast for pink salmon returning in 1992 is approximately 45 to 50 million which would allow a catch of about 25 million. A harvest of 25 million pink salmon would be about 1.5 times the 1960 to 1991 average but considerably less than the 43 million pink salmon harvested in 1991.

A surplus of 1,000,000 pink salmon is expected to the Masset Inlet area of the Queen Charlotte Islands. A below average sockeye and pink fishery are anticipated in Area 3 in 1991. The Skeena sockeye return is forecast to provide an Area 4 commercial net catch of 1,000,000. The Skeena pink return is forecast to provide an Area 4 catch of 950,000.

INTRODUCTION

This report reviews the 1991 Northern Boundary Area pink, chum, and sockeye salmon fisheries of Southeast Alaska and Northern British Columbia and outlines preliminary expectations and fishing plans for 1992. The document is submitted to the Pacific Salmon Commission as required in Article IV of the Pacific Salmon Treaty. In recent years additional tables of catch, effort, and escapement had been provided in a separate annual document to fulfill the requirements of the Northern Panel "Annual Generic Data Exchange". This information has now been incorporated as part of this report. Maps showing the statistical fishing districts/areas for Southeast Alaska and Northern British Columbia are provided in Figures 1 to 5.

SOUTHERN SOUTHEAST ALASKA

1991 Salmon Forecast

Formal forecasts are not made for species of salmon other than pink salmon in Southeast Alaska. The pink salmon forecast for the 1991 return to southern Southeast Alaska was 72.7 million. With an escapement goal of 22.5 million (9.0 million escapement index multiplied by 2.5), a harvest of approximately 50.2 million fish was expected in 1991. This forecast was based on a variance-weighted non-linear regression analysis of 24 years of data (return years 1967 to 1990). The three independent variables used in the analysis were the brood year (1989) escapement index, the average daily minimum air temperature for five stations in southern Southeast Alaska during November 1, 1988 through February 28, 1989, and the total escapement index from the previous two odd-year brood years (1985 and 1987).

Review of the 1991 Fishing Season

Commercial fisheries harvested approximately 47.6 million salmon in southern Southeast Alaska in 1991. This was the third largest salmon harvest since statehood (1959) and was boosted by a harvest of over 43.4 million pink salmon. The total return of pink salmon in 1991 was estimated to be 60.7 million (43.4 million catch plus 6.9 million escapement index expanded by 2.5). Harvests of sockeye, coho, and chum salmon in southern Southeast Alaska were also strong at 1.8 to 2.4 times the 1960 to 1990 average. In 1991 pink salmon were smaller than average;

seine caught pink salmon averaged 2.69 pounds/fish compared to 3.17 pounds/fish in 1990. The ex-vessel price paid per pound for seine caught pink salmon averaged only \$0.13/pound, less than half of the 1990 season's \$0.31/pound. Commercial purse seine, gill net, and trap catch and effort data for 1991, with historical data back through 1960, are presented in Tables 1 to 66.

District 104 Purse Seine Fishery

The U.S./Canada Pacific Salmon Treaty calls for limiting the sockeye salmon harvest in the District 104 purse seine fishery during the period 1990 to 1993 to a maximum four year total catch of 480,000 fish prior to Statistical Week 31. Under the terms of the agreement when the annual catch reaches 160,000 sockeye salmon, no further fishing periods will be allowed prior to Statistical Week 31. All underages not to exceed 20% of the annex ceiling will add to and any overages will subtract from the subsequent four year period.

In 1990, during a four week period (statistical weeks 27-30), 169,943 sockeye salmon were harvested. In this four week period, the district was opened for four fishing days, two 15-hour periods (Statistical Weeks 27 and 28) and two six-hour periods (Statistical Weeks 29 and 30). During the opening in Statistical Week 30, fishing was restricted to the northern portion of District 104.

With approximately 170,000 sockeye harvested in 1990, a harvest of 310,000 sockeye salmon remained for the next three years of the agreement. The policy was to manage the fishery in a way which would allow the remaining fish to be harvested evenly over the next three years. Therefore, in 1991 an informal harvest goal of 100,000 sockeye salmon prior to Statistical Week 31 was set.

The 1991 season opening date for District 104 was July 7, the first Sunday in July (Statistical Week 28). District 104 was opened for a 15-hour period in Statistical Week 28. During this opening, 23,008 sockeye salmon were harvested by 101 boats. In order to limit the sockeye harvest in Statistical Week 29, the district was limited to an initial ten-hour opening on Monday, July 15. However, due to a price dispute with processors, the vast majority of purse seine fishermen did not fish during this opening. Only 3 boats fished in District 104 and they harvested 2,496 sockeye salmon. The Southeast Alaska purse seine fisheries re-opened in Statistical Week 29 on Wednesday, July 17, with District 104 opened for another ten hours. During this opening, in which the seine fleet was not striking, 96 boats harvested 55,115 sockeye salmon. This left approximately 20,000 sockeye to be harvested prior to Statistical Week 31. The district was re-opened on Monday, July 22 (Statistical Week 30) for a six-hour opening, with only the extreme

southern portion of the district open. During the reduced opening, 35 seine boats harvested 17,964 sockeye salmon.

Thus, 98,583 sockeye salmon were harvested in the three statistical weeks fished during the Treaty period in 1991. The district was opened for a total of 41 hours during these three weeks. However, during the initial ten-hour opening in Statistical Week 29, only three boats fished, so realistically the district was only fished for 31 hours during the Treaty period. In the next two years, 211,474 sockeye salmon remain to be harvested from the 480,000 sockeye limit agreed to in the District 104 annex provision of the Treaty.

Beginning on July 28 (Statistical Week 31) and continuing through the final opening on September 3, the District 104 fishery was managed according to the strength of the pink salmon return. In the week immediately following the Treaty period, 8.6 million pink salmon were harvested in the district. This was the largest single week's harvest of pink salmon in the district. Also during this week 297,726 sockeye salmon were harvested. This constituted the largest single week's harvest of sockeye salmon in the district. The harvest of pink salmon remained at record levels for the next several weeks. In Statistical Week 32, another 8.4 million pink salmon were harvested along with 258,766 sockeye salmon. Through the next four weeks of fishing the pink run came in at record levels. Sockeye, coho, and chum salmon were all harvested at record or near record levels in the district.

For the 1991 season, the district was opened for a total of 24 days, 4 within the Treaty period, with one of those days being a strike day, and 20 after the start of Statistical Week 31. These 24 days constituted a total of 428 hours, 41 within the Treaty period, with ten of those hours being a strike period, and 387 after the start of Statistical Week 31. The department managed the seine fisheries in Districts 101 through 104 on a two-days-open and two-days-closed schedule. This allowed the industry to properly handle the record run, the fishermen to prepare for the next openings, and the department to survey the escapements, tabulate catches, and make necessary line changes. Effort levels in the district remained high through most of the season, with an average of 175 boats fishing in the district during an opening.

The harvest of all species were well above average in District 104. For pink salmon 28.4 million fish were caught, the sockeye harvest was 849,831 fish, and the chum harvest was 554,037 fish. All of these catches were the largest in the history of the fishery. The coho harvest of 201,836 fish was the third largest harvest.

Districts 101, 102, and 103 Purse Seine Fisheries

The District 101 purse seine fishery opened for 15 hours on July 7 (Statistical Week 28). The early opening was in anticipation of the predicted large return of pink salmon to southern Southeast Alaska. The effort in District 101 during the initial opening was light, with only 24 boats participating. The light effort was due in part to simultaneous openings in northern Southeast Alaska, where a good early season run was developing, and to the concurrent opening in District 104. As the season progressed in District 101 it became apparent that escapements and harvest levels were less than that in recent years of good returns. The total pink salmon catch of 4.3 million fish in District 101, was below the past ten-year average of 5.04 million fish. Area openings within District 101 were restricted due to lagging pink salmon escapements. The district was also closed earlier than in past years due to lower than anticipated returns.

Districts 102 and 103 were opened on July 11 and July 21, respectively. The harvests of pink salmon in these districts were above the past ten-year averages. These districts were opened for a two-day-on, two-day-off schedule starting on July 17 for District 102 and on July 21 for District 103.

Pink salmon escapements were above goals in all districts except District 101 and 106 (Table 67). Poor weather hampered surveys in mid- and late-August and it is felt that escapements were actually above those recorded, since surveys couldn't be flown in many systems around the time that peak counts are usually obtained.

Tree Point Drift Gill Net Fishery

The Tree Point drift gill net fishery opens by regulation on the third Sunday of June. During the early stages of the fisheries, management is based on the run strength of Alaskan wild stock chum and sockeye salmon and on the run strength of Nass River sockeye salmon. The U.S./Canada Pacific Salmon Treaty calls for an average annual harvest of 130,000 sockeye salmon and also requires steps to be taken to minimize interception of Portland Canal chum salmon. Beginning in the third week of July, when pink salmon stocks begin to enter the fisheries in large numbers, management emphasis shifts to that species. The District 101 Pink Salmon Management Plan sets gill net fishing times at Tree Point in relation to District 101 purse seine fishing time when both fleets are concurrently harvesting the same pink salmon stocks.

In 1991 the gill net fishery at Tree Point was initially opened for a four-day fishing week on June 16 (Statistical Week 25). During this opening, 89 boats harvested 7,431 sockeye and 4,383 chum salmon. Catches

of both species was slightly below average; however, effort levels were also low. Portland Canal was closed to fishing north of Akeku Point throughout the season in order to conserve chum salmon stocks returning to Portland Canal. Due to the low returns of sockeye salmon to Hugh Smith and low escapement levels of chum salmon to Portland Canal systems, the Tree Point fishing time was reduced to three-day weeks for the next four weeks. Beginning in Statistical Week 28, a closure in the northern portion of the gill net area was instituted to protect sockeye salmon returning to Hugh Smith Lake. This area closure was in conjunction with an area closure in the District 101 purse seine fishery. This area closure was in place for the next four weeks.

On July 21 (Statistical Week 30), the District 101 Pink Salmon Management Plan was initiated and continued through Statistical Week 35. Five day fishing weeks were allowed under the plan starting in Statistical Week 30 and lasting through Week 34. During the final week (Statistical Week 35) of the Plan, a four-day week was allowed. Effort levels remained well below average through the season. During the peak weeks of the season 80 to 90 boats fished at Tree Point compared to averages of 120 to 130 over the past several years. During the last three weeks of the season at Tree Point, three days of fishing per week was allowed. The catches of fall coho and chum salmon were generally above average during this time period. Late coho catches were well above average; the hatchery contribution has not been determined to date.

The total harvest of sockeye salmon at Tree Point was 131,487 fish. This brings the 1985 to 1991 average to 129,154 sockeye salmon. The harvest of 600,529 pink salmon is low considering the overall large return of pink salmon to other portions of southern Southeast Alaska. Additionally, the small average size of pink salmon this season reduced their catchability by gill net gear. The harvest of 70,319 coho salmon was well above the ten-year average of 37,000. The chum harvest of 183,822 is below the ten-year average of 212,000. The contribution of enhanced coho and chum salmon returning to Nakat Inlet has not been determined yet.

Programs to estimate sockeye salmon escapements are only in place for two systems in southern Southeast Alaska, Hugh Smith and McDonald Lakes. The weir count of 6,024 sockeye salmon escaping to Hugh Smith Lake (Table 68) was more than the 1,285 escapement in 1990 but well below the escapement target of 27,000. A record 176,178 sockeye salmon were estimated in the escapement to McDonald Lake. This escapement is well above the 52,787 escapement target.

Escapements of chum salmon into Portland Canal systems were poor in 1991 (Table 69). The peak escapement count of 1,721 chum salmon in Fish Creek was lower than that observed since the early 1970's. Chum salmon

escapements in Portland Canal have declined annually since the high levels observed in 1988.

Management Performance Relative to Treaty Requirements

District 104 Purse Seine Fishery

The U.S./Canada Pacific Salmon Treaty calls for limiting the sockeye harvest in the District 104 purse seine fishery during the period 1990 to 1993 to a maximum four-year total of 480,000 caught prior to Statistical Week 31. Under the terms of the agreement when the annual catch reaches 160,000 sockeye salmon, no further fishing periods will be allowed prior to Statistical Week 31. All underages not to exceed 20% of the annex ceiling will add to and any overages will subtract from the subsequent four year period.

In 1991 there were three weeks of fishing prior to Statistical Week 31. The fishery began on July 7 for a 15-hour period. Approximately 23,000 sockeye were harvested during this opening. During Statistical Weeks 29 and 30, three open periods were allowed. The district was opened for two ten-hour periods and one six-hour period with area restrictions. However, during the first ten-hour period in Statistical Week 29, only three boats fished due to a general strike by the Southeast Alaska purse seine fleet. The total harvest of sockeye salmon prior to Statistical Week 31 in 1991 was 98,583 fish.

During the first two years of the Treaty, approximately 268,526 sockeye salmon have been harvested. This leaves approximately 211,474 sockeye to be harvested prior to Statistical Week 31 during the 1992 and 1993 fishing season.

Week	1990	1991
27	24,485	-
28	41,117	23,008
29	64,795	57,611
30	39,546	17,964
Total	169,943	98,583
Cumulative	169,943	268,526

District 101 Tree Point Drift Gill Net Fishery

The Treaty specifies an average annual harvest of 130,000 sockeye salmon in the Tree Point gill net fishery. The preliminary estimate of total sockeye harvest in 1991 is 131,487 fish. This brings the average annual harvest since 1985 to approximately 129,154 sockeye salmon.

Year	Annual Harvest	Avg. Ann. Harvest
1985	172,736	172,736
1986	145,631	159,184
1987	107,503	141,957
1988	116,092	135,490
1989	144,936	137,380
1990	85,690	128,765
1991	131,487	129,154

1992 Salmon Forecast for Southern Southeast Alaska

Formal forecasts are not made for species of salmon other than pink salmon in Southeast Alaska. The official 1992 southern Southeast Alaska return forecast has not yet been released. However, a preliminary forecast suggests approximately 45 to 50 million pink salmon returning to southern Southeast Alaska. With an escapement goal of 22.5 million, a harvest of approximately 25 million pink salmon is expected. A harvest of 25 million pink salmon would be about 1.5 times the 1960 to 1991 average but considerably less than the 43 million pink salmon harvested in 1991. These preliminary estimates are based on the model used for the 1991 forecast (i.e., a variance-weighted, non-linear regression using brood year escapement index, average daily minimum winter air temperature, and total escapement index for the previous two even brood-years) and may differ from the final official forecast expected to be released late in 1991.

NORTHERN BRITISH COLUMBIA

1991 Salmon Forecast

Area 1

Sockeye. There are no significant local sockeye stocks in Area 1. A catch of 30,000 Skeena and Nass sockeye was anticipated.

Pink. Local odd-year pink salmon were not expected to have harvestable surpluses but passing stocks, particularly Skeena pink salmon, were expected to produce a catch of 200,000.

Chum. A small fishery on local stocks was expected in Masset Inlet.

Area 3

Sockeye. A below average sockeye return to Area 3 of 360,000 was expected to provide an Area 3 net catch of 140,000. In addition, a catch of 240,000 Skeena sockeye was anticipated for a total catch of 380,000 fish.

Pink. An above average pink return of 1,000,000 was anticipated, sufficient to provide an Area 3 catch of 625,000. In addition, a catch of 2,000,000 Skeena pink should be caught in Area 3 net fisheries, for a total catch of 2,625,000.

Chum. Area 3 chum stocks remain depressed. A total catch of 130,000 local and other chum stocks was anticipated.

Area 4

Sockeye. The Skeena sockeye return to Canadian fisheries was forecast to be 2,100,000, estimated to provide an Area 4 commercial net catch of 800,000.

Pink. The total Skeena pink return is forecast at 6,000,000. This was expected to provide an Area 4 catch of 2,250,000 pink salmon.

Area 5

Sockeye. A catch of approximately 20,000 local sockeye was predicted for Area 5. In addition, a directed fishery on Skeena stocks for a catch of 30,000 sockeye was expected in 1991.

Pink. A harvestable surplus of 250,000 local pink salmon and a projected catch of 250,000 Skeena pink salmon indicated a total projected catch of 500,000 in Area 5.

Chum. Local chum stocks are depressed but small incidental catches were expected.

Review of 1991 Fishing Season - Net and Troll Fisheries

Area 1

The Area 1 net fishery can be separated into two distinct fisheries. The fishery on passing stocks (July to mid-August) is concentrated in the Langara Island region off the northwest corner of the Queen Charlotte Islands. This is predominantly a seine fishery harvesting passing sockeye and pink salmon bound mainly for the Skeena River. Nass, Fraser and southern Southeast Alaskan stocks are also caught incidentally. The second fishery (mid-August to October) in Masset Inlet and Naden Harbour is a gillnet and seine fishery for surplus local chum and even-year pink stocks. Area 1 weekly net catch and effort information for 1991 is outlined in Tables 70 and 71. Annual Area 1 gillnet and seine catch from 1973 to 1991 is also provided for comparison (Table 72). A map of the local management subareas is included (Figure 4).

The 1991 fishery on passing stocks opened July 26 and operated for a total of 9.4 fishing days before closing August 19. The sockeye catch totalled 99,389, and the pink catch 233,531.

The 1991 fishery on local chum stocks opened September 23 with a 12-hour chum fishery in Masset Inlet, Virago Sound and McIntyre Bay. Catches were very poor with a total of only 184 chum for the 5 vessels participating. On September 30, McIntyre Bay and Masset Sound opened again to a fleet of only 6 gillnet boats. As the catch was again poor (280 chum for 6 vessels), the fishery was closed for the season.

Area 3

Management units (sub-areas) of Statistical Area 3 are outlined in Figure 5. In recent years, the Area 3 sockeye gillnet fishery started in late June or early July. In-season abundance is determined from the Nass River test fishery, local Native food fisheries, and Canadian and Alaskan commercial catch levels.

The Area 3 fishery is managed for Nass sockeye salmon until mid-July. After mid-July the Area 3 outside fishery is managed for Nass pink and Skeena pink and sockeye stock abundance. The inside fishery is managed for Nass sockeye, pink and chum abundances.

Weekly 1991 hauled catch data by gear type for Areas 3 (1-4), 3 (7-17) and total Area 3 are presented in Tables 73 to 78. Annual gillnet and seine saleslip catch information (1973 to 1991) for these same area groupings are provided in Tables 79 to 81. In addition, weekly 1991 hauled catch data by gear type for Areas 3-1, 3-7, 3-11 and 3-17 are provided in Tables 82 to 89. The 1991 gillnet fishery opened on June 24, followed by the seine fishery beginning July 14. The season ended on August 27 for both gear types. There was a total of 36 days fishing for gillnets (10 of these days were area 3-12 only for a total of 86 boat days) while seine fishing days totalled 18. The gillnet sockeye catch of 174,746 was well above recent years, due to an above average return to the Nass and to a lesser extent Skeena Rivers. The Area 3 seine catch of 650,479 sockeye was also higher than recent years reflecting the increased harvest of pink salmon and the increased sockeye abundance.

The catch of pink salmon by gillnets (217,388) and seines (9,131,161) was well above the long term average (139,780 gillnet and 2,095,757 seine, 1973 to 1991) and the expected levels. Of the total Area 3 pink net catch of 9,348,549, 61 percent (or 5,717,399) were taken in outside management units 3 (1-4). This is less than the pre-Treaty (1973-1984) average of 74 percent. The total Area 3 seine effort of 2,958 boat days was well above the pre-Treaty average (1973 to 1984) of 1102 boat days. In 1991, 72 percent of the total seine effort was expended in management units 3 (1-4), which is slightly above the 1973 to 1984 pre-Treaty average of 68 percent.

Sockeye escapements to the Nass were above target, with 250,000 past the Meziadin Fishway. The Area 3 escapement estimates for non-Meziadin systems are roughly estimated to be 50,000, for an Area 3 total of 300,000. The total Area 3 escapement target is 200,000. The Nass test fishery underestimated the overall escapement indicating 229,684 past the Nass test fishery. Preliminary pink escapements to Area 3 are not yet finalized, but met or exceeded the target level in all but a few streams. Preliminary chum escapements to Area 3 were again very poor in 1991.

Table 90 presents preliminary escapements for 1991 where available, and Table 91 provides historical annual escapements.

Area 4

The Area 4 gillnet fishery opens in late June or early July, and targets on the Skeena sockeye and pink returns. Seine openings are provisional on the need to balance the domestic seine and gillnet catch allocations and the requirement to harvest surplus Skeena sockeye and pink salmon. The emphasis for management switches to pink salmon in early August after the bulk of the sockeye run is through. In-season abundance is determined by the Skeena test fishery, native food fish catches and commercial catches in Area 4, as well as catches in adjacent Canadian fishing areas and in southern Southeast Alaska.

Area 4 weekly hailed catch information by gear type for 1991 is provided in Tables 92 and 93 and annual catch by gear from 1973 in Table 94. The 1991 net fishery in Area 4 began for gillnets on July 1, ending on August 27 with a total of 25 fishing days (slightly above the 1973 to 1991 average of 23). The gillnet effort was higher than normal (10,931 vs. the 1973 to 1991 average of 8,975 boat days). Seines began fishing on August 4 in Area 4 and continued through to August 20, for a total of only 6.9 days (below the 1973 to 1991 average of 9). The seine effort in Area 4 was also lower than average (178 vs 273 boat days). In comparison with the 1973 to 1991 average catches (855,400 for gillnet and 91,607 for seine), the gillnet sockeye catch of 1,038,267 was higher while the seine catch of 45,279 was lower than average. The gillnet and seine catches of pink salmon were 1,421,220 and 850,589 respectively, both well above the long term averages of 664,247 and 233,667.

Beginning in the first week of August, a special seine fishery directed at pink salmon opened in terminal portions of Area 4. Total pink catch in this fishery was 644,830. During this fishery, coho, chum, and steelhead could not be retained.

The preliminary sockeye escapement estimate of 1.3 million is above the management target of 1 million and the test fishery estimate of 1,046,071. The pink escapement estimate of 4.1 million from the test fishery is well above the management target of 1.0 million. The preliminary 1991 spawning escapements for Area 4 and annual escapements from 1966 to 1990 are provided in Tables 90 and 95.

Area 5

Management of the Area 5 fishery during July is based on Skeena sockeye abundance with closures to protect depressed local sockeye stocks. In

early August, the fishery targets on Skeena pink stocks which use Area 5 as a migration route. In late August fisheries are managed for local pink stocks.

In 1991 the gillnet fishery in Area 5 began on July 1 in conjunction with the Area 4 gillnet fishery. Seine fishing in Area 5 began on July 14 and August 27 was the last day of fishing for both gear types. Hailed catch information by gear type for 1991 is provided in Tables 96 and 97 for all Area 5, and in Tables 98 and 99 for Area 5 subareas 5-10, 5-11 and 5-12. The annual Area 5 catch by gear from 1973 to 1991 is provided in Table 99. The total sockeye harvest of 19,357 was lower than the 1973 to 1991 average of 35,189. Although the total days fishing (24 gillnet days, 18 seine days) were similar to the 1973 to 1991 average, the fleet size was much lower than the average for this time period. The total pink catch of 451,656 is slightly higher than the 1973 to 1991 average of 405,321. Of the total Area 5 pink catch 6,670 or 1.5 percent was harvested in Management Units 5-10, 5-11 and 5-12.

Preliminary 1991 escapement information for Area 5 is provided in Table 100 and annual historical spawning escapements are provided in Table 101.

Area 1 Pink Troll Fishery

The 1991 Area 1 pink troll fishery opened June 28 and concluded September 5 when northern British Columbia was closed to all salmon trolling. The Area 1 pink troll catch in the A-B line strip (Figure 6) was monitored in-season by hailing trollers on the grounds to establish catch rates and conducting overflights to estimate effort. The A-B line strip was closed to pink trolling July 22 in accordance with Pacific Salmon Treaty obligations. The A-B line strip catch to July 22 was 71,620 pink salmon, well below the ceiling of 300,000 (Table 102). Overall pink troll catches in Area 1 are monitored in-season from effort overflights and shore based sampling procedures. The Area 1 pink troll catch was 1.59 million pink salmon. Table 103 illustrates the Area 1 weekly troll catches for 1991 and Table 104 outlines the annual (1973 to 1991) Area 1 troll catches.

Management Performance Relative to Treaty Requirements

Areas 3 (1-4) and 5-11 Pink Net Catch

Under the Pacific Salmon Treaty the outside portions of Statistical Areas 3 and 5 (Management Units 3-1, 3-2, 3-3, 3-4 and 5-11) are to be managed such that an average annual pink harvest of 900,000 is achieved.

In 1991, 5,724,069 pink salmon were harvested in Management Units 3 (1-4) and 5-11 combined. This high catch reflects the very large pink returns to the Northern Boundary Area in 1991. Figures 7 and 8 illustrate the pink catch by net gear type for subareas 3 (1-4) and total Area 3 from 1973-1991. Figure 9 tracks the proportion of the Area 3 net catch taken from subareas 3 (1-4) from 1973 to 1991. Equivalent effort statistics are provided in Figures 9, 10, and 11. The proportion of the catch taken in subarea 3 (1-4) during the 1991 season (61 percent) was substantially lower than the pre-Treaty average (1973-1984, 74 percent) and equivalent to the 1985 to 1990 Treaty average of 60 percent. The 1991 gillnet effort in the outer subareas of Area 3, as a proportion of the total Area 3 gillnet effort, was higher than the pre-Treaty average (46 vs 28 percent). Seine effort in subareas 3 (1-4), as a proportion of total Area 3, was also higher compared to the pre-Treaty average (72 vs 68 percent).

Most years since the signing of the Treaty were characterized by exceptionally large pink returns to the Northern Boundary Area. The outcome was large or record level pink catches for these years. Consequently, the current average annual pink harvest from 1985 to 1991 in the Treaty area (subareas 3 (1-4) and 5-11) is 2,046,023.

Area 1 Pink Troll Fishery

The Area 1 pink troll fishery is to be managed to an annual ceiling of 1.95 million pink salmon with a cumulative ceiling of 5.125 million pink salmon for the period 1990 to 1993. In addition, the area adjacent to the Canada-U.S. border in the northern portion of Area 1 (Area 101-4, 101-8 and those portions of 101-3 and 103 north of 54 degrees 37 minutes N. latitude, see Figure 6) closes to pink retention if the pink catch reaches 300,000 in this area, or by July 22, should this sub-ceiling not be met.

Treaty Related Performance

The pink catch in the A-B line area did not reach the 300,000 sub-ceiling and the fishery was closed to pink retention at midnight on July 22, as required. The catch in this area was estimated to be 71,620 pink salmon. The pink troll fishery continued in the rest of Area 1 until September 30. Preliminary information from saleslips indicate an Area 1 troll catch of 1.59 million. The final total Area 1 weekly pink catches are illustrated in Figure 12.

1992 Salmon Forecast Northern British Columbia

Introduction

Expectations and fishing plans for 1992 are still preliminary. Specific opening dates and fishing patterns are determined through consultations with industry and since this process has not yet been completed it is too early to provide details. A summary of the forecasts for Areas 1, 3, 4 and 5 are provided in Table 105.

Area 1 Expectations

Sockeye. There are no significant local sockeye stocks in Area 1. A catch of 50,000 Skeena and Nass sockeye is anticipated.

Pink. A surplus of 1,000,000 pink salmon is forecast from the Yakoun brood year escapement of 1.2 million.

Chum. A very small gillnet assessment fishery is expected in Masset Inlet.

Fishing Plans. A small fishery on Skeena-Nass bound sockeye and pink salmon is planned, and management will be based on abundance of these stocks. Commercial fisheries to assess pink stock strength in Masset Inlet are anticipated for late August.

Area 3 Expectations

Sockeye. A below average sockeye return to Area 3 of 330,000 is expected and should provide for an Area 3 net catch of 110,000. In addition, a catch of 250,000 Skeena sockeye is anticipated for a total catch of 360,000. The estimates of Area 3 sockeye returns to Canada are highly variable.

Pink. A below average pink return of 450,000 is anticipated, sufficient to provide an Area 3 catch of 200,000. In addition, 1,000,000 Skeena pink salmon should be caught in Area 3 net fisheries, for a total catch of 1.2 million.

Chum. Area 3 chum stocks remain depressed. A total catch of 100,000 local and other chum stocks is anticipated.

Fishing Plans. A moderate level sockeye fishery and a below average (for recent years) pink fishery are anticipated in Area 3 in 1992.

Area 4 Expectations

Sockeye. The Skeena sockeye return is forecast to be 2,300,000 providing an Area 4 commercial net catch of 1,000,000.

Pink. The Skeena pink return is forecast at 4,000,000. This is above historical average returns, but below the more recent years of high returns. This is expected to provide an Area 4 catch of 950,000.

Chum. Skeena chum escapements are severely depressed and chum are only caught incidentally.

Fishing Plans. In 1992, average sockeye fisheries are forecast for July, while pink salmon fisheries in August are expected to be similar to those in recent years. Domestic management initiatives to reduce the catch of coho, chum, chinook, and steelhead will again be an important factor in 1992 management.

Area 5 Expectations

Sockeye. A catch of approximately 20,000 local sockeye is predicted for Area 5. In addition, a directed fishery on Skeena stocks for a catch of 25,000 sockeye is also anticipated.

Pink. A harvestable surplus of 250,000 local pink salmon along with a harvest of 50,000 Skeena pink salmon should provide for a total catch of 300,000.

Chum. Local chum stocks are depressed but small incidental catches are expected.

Fishing Plans. Area 5 fishing patterns will be based largely on the abundance of Skeena sockeye and pink salmon.

Table 1. Weekly commercial catch and fishing effort in the 1991 Alaska District 101 purse seine fishery.

Stat. Week	Effort		Catch

NOTE: 1973 TO 1982 CATCH FIGURES ARE TAKEN FROM B.C. SALES SLIP DATA. *FOR PINKS, 1973-82, THE CATCH IS CALCULATED: $3X+3Y+\Delta 3Z$ WHERE $\Delta 3Z=25\%$ OF $3Z$.

1983-1989 WERE CALCULATED FROM THE TOTAL AREA 3 FINAL SALES SLIPS USING THE ANNUAL HAIL COUNTS TO ALLOCATE THE CATCH TO 3(1-4) AND TO 3(7-17).

1990 SALES SLIP DATA DATED AUGUST 2, 1991 PRORATED WITH HAILS.

1991 CATCH FIGURES ARE BASED ON HAIL DATA.

+ FOR CHINOOK, THE 3(1-4) AND 3(7-17) DATA ARE AVAILABLE ONLY FOR LG AND JACKS COMBINED PREVIOUS TO 1982. THE AVERAGE SHOWN AT THE BOTTOM OF THE TABLE, THEN, IS FOR YEARS 1982-91.
