EXECUTIVE SUMMARY

This report reviews: 1) catch, effort, and management actions in the 1993 Northern Boundary Area pink, chum, and sockeye salmon fisheries of southern Southeast Alaska Districts 101 to 106 and northern British Columbia Areas 1, 3, 4, and 5; 2) management performance relative to Treaty requirements; 3) historical catches and escapements; and 4) preliminary 1994 expectations and fishing plans for 1994.

In southern Southeast Alaska, the all-gear salmon harvest of 45.5 million was the fourth largest on record behind harvests of 49 million salmon in 1986 and 1989 and 47 million in 1991. The harvest was comprised of 39.2 (86.0%) million pink, 2.7 (5.9%) million chum, 2.3 (5.1%) million sockeye, 1.3 (2.8%) million coho, and 98 (0.2%) thousand chinook salmon. Pink salmon escapements were well distributed and above index goals in all southern Southeast Alaska districts except District 107. Escapement indices totaled 7.88 million or 1.88 million above the 6.0 million escapement target. Escapements of sockeye, chum, and coho salmon were correspondingly strong throughout the region.

In Northern British Columbia, pink returns were poor relative to recent years; 2,059,410 pink salmon were harvested in Canadian Area 3 and only 431,926 pink in the Area 4 fishery. Pink escapements to most areas were near goals. Sockeye returns were very large; 1,202,040 were harvested in Area 3 and 1,575,989 in Area 4. Chum catches were much better than in recent years. Escapement levels for sockeye were again well above target for the Nass and Skeena Rivers. Escapements of summer chum salmon were relatively good in Area 3.

The Pacific Salmon Treaty limits the Alaska District 104 (Noyes Island) purse seine fishery to a four-year total catch (1990-1993) of 480,000 sockeye salmon prior to Statistical Week 31. Under terms of the agreement, when the annual catch reaches 160,000 sockeye salmon, no further daily fishing periods are allowed prior to week 31. During the first three years of the Annex, 1990, 1991, and 1992, 348,169 sockeye were harvested prior to Statistical Week 31. This left a maximum harvest of 132,000 sockeye prior to Statistical Week 31 in 1993. There were three weeks of fishing prior to Statistical Week 31 in 1993. The total sockeye harvest prior to Statistical Week 31 in 1993 was 163,189 fish. This put the total sockeye harvest at the end of the four year Annex at 511,358, or 31,358 (6.5%) sockeye over the 480,000 Annex limit.

In the Alaska District 101-11 (Tree Point) gillnet fishery the U.S./Canada Pacific Salmon Treaty calls for an average annual harvest, beginning in 1985, of 130,000 sockeye salmon. The 1993 harvest of sockeye salmon at Tree Point was 393,996 fish, the largest sockeye harvest in the history of the fishery. This brings the 1985 to 1993 average to 171,458 sockeye.

Under the Pacific Salmon Treaty the outside portions of Canada's Statistical Areas 3 and 5 are to be managed such that an average annual pink harvest of 900,000 is achieved. In 1993, 1,237,096 pinks were harvested in Management Units 3(1-4) and 5-11 combined. The current average annual pink harvest from 1985-1993 in the treaty area is 1,991,416.

The Canadian Area 1 pink troll fishery is managed to an annual ceiling of 1.95 million pinks with a cumulative ceiling of 5.125 million pink salmon for the period 1990-1993. In addition, the area adjacent to the Canada-U.S. boundary in the northern portion of Area 1 closes to pink retention if the pink catch reached 300,000 in this area, or by July 22, should this sub-ceiling not be met. In 1993, the pink catch in the A-B line area reached 264,500 and closed to pink retention July 22. Preliminary saleslips indicate an Area 1 troll catch of 889,900 providing a cumulative catch from 1990-1993 of 4,431,429, which leaves a shortfall of 693,571 from the ceiling.

Strong harvests are forecast for Southeast Alaskan pink salmon in 1994. The Alaska Department of Fish and Game forecasts a harvest of between 38 and 57 million pink salmon in all of Southeast Alaska in 1994. This harvest plus the target escapement of 27 million pink salmon indicates a total return of pink salmon to Southeast Alaska of approximately 65-84 million fish.

In Canada, average sockeye fisheries are anticipated in Area 3 and Area 4 in 1994, while lower than average pink catches are anticipated. The even-year pink run to Canada's Queen Charlotte Islands is expected to provide a modest surplus in 1994.

INTRODUCTION

This report reviews the 1993 Boundary Area pink, chum and sockeye salmon fisheries of Southeast Alaska and Northern British Columbia and outlines preliminary expectations and fishing plans for 1994. The document is submitted to the Pacific Salmon Commission as required in Article IV of the Pacific Salmon Treaty. Weekly catch and effort data is provided by district/area, gear, and species for Northern Boundary Area fisheries from 1960 to 1993. Sub-area catch data is also presented for Canadian Areas (3-1), 3(2-4) and 3(7-17). Canadian catch data for 1993 is based on hail surveys as saleslip data is preliminary at this time. Maps showing the statistical fishing districts/areas for Southeast Alaska and Northern British Columbia are provided in Figures 1 to 5.

SOUTHERN SOUTHEAST ALASKA

1993 Salmon Forecast

Formal forecasts are not made for species of salmon other than pink salmon in Southeast Alaska. The pink salmon forecast for the 1993 return to all of Southeast Alaska was 83.0 million fish with an expected harvest of 52.3 million. Individual forecasts for northern and southern Southeast Alaska were not officially made for 1993. However, ADF&G biologists anticipated that 30-40 million pink salmon will be harvested in southern Southeast Alaska in 1993.

Review of the 1993 Fishing Season

Escapements of sockeye, chum, and coho salmon were correspondingly strong throughout the region. Commercial fisheries harvested approximately 45.5 million salmon in southern Southeast Alaska in 1993, this includes purse seine, drift gillnet, troll, and hatchery harvests from Districts 101 through 108, 150 and 152, and the salmon harvests in the Annette Island Fishery Reserve. This is the fourth largest salmon harvest on record for southern Southeast Alaska behind harvests of 49 million salmon in 1986 and 1989 and 47 million in 1991. The harvest was comprised of 39.2 (86.0%) million pink, 2.7 (5.9%) million chum, 2.3 (5.1%) million sockeye, 1.3 (2.8%) million coho, and 98 (0.2%) thousand chinook salmon. Historical catch and effort data by district, gear, species, and week is presented in Tables 1-66.

District 104 Purse Seine Fishery

The U.S./Canada Pacific Salmon Treaty calls for limiting the sockeye salmon harvest in the District 104 purse seine fishery during the period 1990 to 1993 to a maximum four year total catch of 480,000 fish

prior to Statistical Week 31. Under the terms of the agreement when the annual catch reaches 160,000 sockeye salmon, no further fishing periods will be allowed prior to Statistical Week 31. All underages not to exceed 20% of the annex ceiling will add to and any overages will subtract from the subsequent four year period.

During the first three years of the Annex, 1990, 1991, and 1992, 348,169 sockeye were harvested prior to Statistical Week 31. This left a maximum harvest of 132,000 sockeye prior to Statistical Week 31 in 1993. There were three weeks of fishing prior to Statistical Week 31 in 1993.

The 1993 season began on July 4 (Statistical Week 28) for a 10-hour opening. This was the first time that the initial opening in District 104 has been reduced to 10 hours. During this opening 41,774 sockeye salmon were harvested by 88 purse seine boats. In order to limit the sockeye harvest in Statistical Week 29, the district was again limited to a 10-hour opening on July 11. Eighty-nine seine boats participated in the fishery and harvested 27,401 sockeye salmon. This left approximately 69,200 sockeye to be harvested in Statistical Week 30. The district was opened on July 18 for 15 hours. During this opening 21,759 sockeye were harvested by 87 seine boats. This left approximately 41,100 sockeye salmon to be harvested under the 480,000 limit. On July 22 the district was re-opened for 10 hours. One-hundred-and-six seine boats harvested 72,255 sockeye salmon during this opening. Therefore, the total sockeye harvest prior to Statistical Week 31 in 1993 was 163,189 fish. This put the total sockeye harvest at the end of the four year Annex at 511,358, or 31,358 (6.5%) sockeye over the 480,000 Annex limit. During the first three fishing weeks over 565,000 pink salmon were caught in the District 104 purse seine fishery.

Beginning on July 25 (Statistical Week 31) and continuing through the final day of fishing on September 2, the District 104 fishery was managed according to the strength of the pink salmon return. From Wednesday, July 28 through the end of the season on September 2, the southern Southeast Alaska seine fishery was managed on a two-day-on/two-day-off fishing schedule. Good early season pink salmon escapements and catches in both northern and southern Southeast Alaska prompted this management approach. In the week immediately following the Treaty period, 1.66 million pink salmon were harvested in the District 104 fishery along with 276,478 sockeye and 215,550 chum salmon. However, over the next ten days the escapement of pink salmon into the southern portion of District 103 remained below anticipated levels. Therefore, the lower portion of the District 104 was closed for two openings (August 5 and 6 and August 9 and 10) in order to pass pink salmon into the inside waters to bolster escapements. The pink salmon run developed later than normal in southern Southeast Alaska with peak catches occurring in Statistical Week 33. This may be due in part to the unusually dry weather experienced throughout the region.

For the 1993 season, the district was opened for a total of 24 days, four within the Treaty period, and 20 days after Statistical Week 30. These 24 days constituted a total of 424 hours, 45 within the Treaty period, and 379 after Statistical Week 30. In Statistical Weeks 31 through 34 the number of purse seine boats fishing in the district was again slightly below the effort levels experienced since the inception of the Treaty.

The total season's harvest of 11.6 million pink salmon was slightly below the 1985-1992 average of 12.2 million fish. The harvest of 945,285 sockeye and 581,161 chum salmon were the second largest harvests

on record. The harvest of 170,478 coho in 1993 is above the average of 160,000 coho since the Treaty period.

Districts 101, 102, and 103 Purse Seine Fisheries

The District 101 purse seine fishery opened for 15 hours on July 4 and again on July 8 (Statistical Week 28). These early openings were in response to a strong prediction, good early pink salmon escapements in the mainland rivers of District 101, and strong early pink harvest in some northern districts. The early portion of the run to the inside districts developed later than usual. Therefore, the department managed the fisheries through late July on a series of 15-hour openings on consecutive Sundays and Thursdays. As early season escapement levels were attained the purse seine fishery, starting on July 28, was managed on a two-day-on/two-day-off fishing schedule. The final harvest of 6.7 million pink salmon was above the 1985 to 1992 average of 5.5 million. The pink salmon escapement index in the district was approximately 2.2 million compared to the index goal of 2.0 million.

In 1993, a terminal seine fishery was conducted in District 101 adjacent to Yes Bay, in West Behm Canal, to harvest sockeye salmon returning to McDonald Lake. During the ten days this area was open to purse seining approximately 150,000 sockeye were harvested. Also in this same fishery approximately 140,000 chum salmon were harvested. Many of those chum salmon were destined to the Neets Bay Hatchery operated by the Southern Southeast Regional Aquaculture Association.

Districts 102 and 103 were opened on July 8 and July 25, respectively. The harvest of pink salmon in these districts were above the 1985 to 1991 averages with 6.1 million pink salmon harvested in District 102 and 6.8 million harvested in District 103. Pink salmon escapements were above goals in both districts. The index escapement in District 102 was 962,000 compared to the 600,000 goal and the index escapement in District 103 was 2.98 million compared to the 1.7 million goal.

Tree Point Drift Gillnet Fishery

The Tree Point drift gillnet fishery opens by regulation on the third Sunday of June. During the early stages of the fishery, management is based on the run strength of the Alaskan wild stock chum and sockeye salmon and on the strength of the Nass River sockeye salmon. Beginning in the third week of July when pink salmon stocks begin to enter the fishery in large numbers, management emphasis shifts to that species. By regulation, the District 101 Pink Salmon Management Plan begins on the third Sunday of July. The Plan sets gillnet fishing time at Tree Point in relation to the District 101 purse seine fishing time, when both fleets are concurrently harvesting the same pink salmon stocks. The U.S./Canada Pacific Salmon Treaty calls for an average annual harvest of 130,000 sockeye salmon.

In 1993, the gillnet fishery at Tree Point was initially opened for a four-day fishing week on June 20 (Statistical Week 26). Catches of sockeye salmon in Statistical Weeks 26, 27, 31 and 32 were at record levels. During those four weeks approximately 269,000 sockeye were caught. Prior to the start of the District 101 Pink Salmon Management Plan in Statistical Week 30, Tree Point had four weeks of fishing

which were comprised of two four day fishing weeks (Statistical Weeks 26 and 27) and two three day weeks (Statistical Weeks 28 and 29). Overall, effort levels at Tree Point were close to the levels experienced since the inception of the Treaty.

On July 18 (Statistical Week 30), the District 101 Pink Salmon Management Plan was initiated and continued through Statistical Week 36. A four-day week was allowed in Statistical Week 30 and five-day weeks were mandated under the Plan for the next six weeks.

During the final three weeks of the Tree Point season fall management was initiated and only two day fishing weeks were allowed. Although chum catches were above average, coho harvests were below average through late August and into early September so a conservative management approach was taken. The last week at Tree Point the coho catch was above the previous eight year average, perhaps indicating an overall late return of fall coho to southern Southeast Alaska. Portland Canal was closed to fishing north of Akeku Point throughout the season in order to conserve chum salmon stocks returning to the Canal.

The total harvest of sockeye salmon at Tree Point was 393,996 fish. This is the largest sockeye harvest of the fishery. This brings the 1985 to 1993 average to 171,458 sockeye. The chum harvest of 383,285 is the second largest harvest on record. Contributions of enhanced salmon returns have not been determined at this time. The harvest of 480,963 pink salmon and 32,488 coho salmon are below the last eight year average.

Tree Point was opened for 1296 hours in 1993. This is above to the last eight year average of 1096 hours.

Pink, Sockeye, and Chum Salmon Escapements

Pink salmon escapements were well distributed and above index goals in all southern Southeast Alaska districts except District 107 (Table 67). Escapement indices totaled 7.88 million or 1.88 million above the 6.0 million escapement target.

Programs to estimate sockeye salmon escapements are only in place for two systems in southern Southeast Alaska, Hugh Smith and McDonald Lakes (Table 68). The Hugh Smith sockeye escapement was approximately 13,530 based on weir counts and the results of a secondary marking study. This escapement is about half of the informal escapement goal of 27,000. McDonald Lake's escapement is estimated to be 83,514 sockeye based on an expansion of foot survey counts. This escapement falls within the informal goal range of 70,000 to 85,000. Approximately 150,000 McDonald Lake sockeye were harvested in a near-terminal purse seine fishery in 1993.

A weir was operated on Fish Creek in Portland Canal to enumerate chum salmon for the third consecutive year. The 1993 weir count totaled 60,447 chum salmon (Table 69). In 1991, only 9,916 chum salmon were counted through the weir and 46,771 chum were counted through the weir in 1992. An estimated 36,303 chum salmon escaped to Marx Creek this season and 17,953 live and dead chum were counted in foot surveys of Salmon River. Thus, the total escapement of chum salmon in these upper Portland Canal

tributaries exceeded 115,000 fish this year. Aerial survey counts of live chum salmon at Tombstone River was 20,000, the highest count since the mid-1980's (Table 69).

Coded Wire Tag Releases

Coded wire tag mark-recovery programs provide information on migration routes and fishery contributions for hatchery and wild stocks in Southeast Alaska. Preliminary releases of coded wire tagged salmon in Southeast Alaska in 1993 are listed in Table 70.

Management Performance Relative to Treaty Requirements

District 104 Purse Seine Fishery

The U.S./Canada Pacific Salmon Treaty calls for limiting the sockeye salmon harvest in the District 104 purse seine fishery during the period 1990 to 1993 to a maximum four year total catch of 480,000 fish prior to Statistical Week 31. Under the terms of the agreement when the annual catch reaches 160,000 sockeye salmon, no further fishing periods will be allowed prior to Statistical Week 31. All underages not to exceed 20% of the annex ceiling will add to and any overages will subtract from the subsequent four year period.

During the first three years of the annex 348,169 sockeye were harvested prior to Statistical Week 31. This left a maximum harvest of 131,831 sockeye in 1993, the final year of the Annex.

In 1993 there were three weeks of fishing prior to Statistical Week 31. The fishery began on July 4 (Statistical Week 28) for a 10 hour opening. Approximately 41,800 sockeye were harvested during this opening. During Statistical Week 29 another 10 hour fishing period was allowed. Approximately 27,400 sockeye were harvested. This left approximately 69,200 sockeye to be harvest in Statistical Week 30. A 15 hour opening was allowed on July 18 (Statistical Week 30). Approximately 21,760 sockeye were harvested. Another 10 hour opening on July 22 was allowed to harvest the remaining 40,100. During that opening approximately 72,300 sockeye were caught bringing the yearly total prior to Statistical Week 31 to 163,189. Therefore, the total sockeye harvest prior to Statistical Week 31 during the four year Treaty Annex period was 511,358 sockeye or 31,358 fish over the 480,000 ceiling.

Week	1990	1991	1992	1993
28	41,117	23,008	30,233	41,774
29	64,795	57,611	38,792	27,401
30	39,546	17,964	10,618	94,014
Total	169,943	98,583	79,643	163,189
Cum.	169,943	268,526	348,169	511,358

District 101 Tree Point Drift Gillnet Fishery

The Treaty calls for an average annual harvest of 130,000 sockeye salmon in the Tree Point gillnet fishery. The preliminary estimate of total sockeye harvest in 1993 is 393,996 fish. This brings the average annual harvest since 1985 to 171,458 sockeye salmon.

Year	Annual Harvest	Avg. Ann. Harvest
1985	172,863	172,863
1986	145,657	159,260
1987	107,595	142,038
1988	116,240	135,589
1989	144,936	137,458
1990	85,690	128,830
1991	131,492	129,210
1992	244,649	143,640
1993	393,996	171,458

1994 Salmon Forecast for Southern Southeast Alaska

Strong harvests of pink salmon are forecast in Southeast Alaska in 1994. The Alaska Department of Fish and Game's preliminary forecast is for a harvest of between 38 and 57 million pink salmon in all of Southeast Alaska in 1994. This harvest, plus the target escapement of 27 million pink salmon, indicates a total return of pink salmon to Southeast Alaska of approximately 65-84 million fish. Individual forecasts for pink salmon in northern and southern Southeast Alaska will not be made this year. Formal forecasts are not made for species of salmon other than pink salmon in Southeast Alaska. However, the returns of sockeye, chum, and coho salmon are expected to be as strong next year as they have been in recent years.

NORTHERN BRITISH COLUMBIA

1993 Salmon Forecast

Area 1

Sockeye. There are no significant local sockeye stocks in Area 1. A catch of 25,000 Skeena and Nass sockeye was anticipated.

Pink. Local odd-year pink salmon were not expected to produce harvestable surplus in 1993, but passing stock, particularly Skeena pinks are predicted to provide a catch of 100,000 pinks.

Chum. A small gillnet assessment fishery was anticipated in Masset Inlet.

Area 3

Sockeye. A below average sockeye return to Area 3 of 250,000 was expected to provide an Area 3 net catch of 75,000. In addition, a catch of 250,000 Skeena sockeye was anticipated for a total catch of 325,000 fish. The Area 3 sockeye returns to Canada have been highly variable in recent years.

Pink. An above average pink return of 1,000,000 was anticipated, sufficient to provide an Area 3 catch of 750,000. In addition, 2,000,000 Skeena pink were expected to be caught in Area 3 net fisheries, for a total catch of 2.75 million.

Chum. Area 3 chum stocks remain depressed. No local surplus was anticipated.

Area 4

Sockeye. The Skeena sockeye return was forecast to be 2,300,000, providing an Area 4 commercial net catch of 1,000,000.

Pink. The Skeena pink return was forecast at 6,000,000. This was above historical average returns, but equals the 1991 forecast. This was expected to provide an Area 4 catch of 1,400,000.

Area 5

Sockeye. A catch of approximately 25,000 local sockeye was predicted for Area 5. In addition, a directed fishery on Skeena stocks for a catch of 25,000 sockeye was also anticipated.

Pink. Local Area 5 pink stocks are not expected to provide a large harvestable surplus, however, Skeena pinks should offer a catch of 500,000 in Area 5 bringing the total catch to 575,000.

Chum. Local chum stocks are depressed and no surplus was anticipated.

Review of 1993 Fishing Season - Net and Troll Fisheries

Area 1

The Area 1 net fishery can be separated into two distinct fisheries. The fishery on passing stocks (July to mid-August) is concentrated in the Langara Island region off the northwest corner of the Queen Charlotte Islands. This is predominantly a seine fishery harvesting passing sockeye and pink salmon bound mainly for the Skeena River. Nass, Fraser and Southern Southeast Alaskan stocks are also caught incidentally. The second fishery (mid-August to October) concentrated in Masset Inlet and Naden Harbour is a gillnet and seine fishery for surplus local chum and even-year pink stocks. The weekly 1993 catch statistics for Area 1 gillnet and seine fisheries are provided in Tables 71 and 72. Effort data is expressed in the number of boats fishing during each opening, the hours fished, and the portion of 24-hour days represented by the hours fished.

Area 1 historical (1960-1993) weekly net catch data for passing and local stocks is outlined in Tables 73 - 78. Effort data is provided for years 1973-1992 in Table 79. A map of the local management subareas is included (Figure 4).

The 1993 Area 1 net fishery on passing stocks opened July 17 and operated for a total of 15 gillnet days and 7 seine fishing days before closing August 26 for gillnets and August 10 for seines. The sockeye net catch totalled 202,716 and the pink catch 65,768.

The local chum fishery showed relatively poor catches, totalling 13,872 chum caught primarily in two openings, October 21 and 22 by two seine boats.

Area 3

Management units (sub-areas) of Statistical Area 3 are outlined in Figure 5. In recent years, the Area 3 sockeye gillnet fishery has started in late June or early July. In-season abundance is determined from the

Nass River test fishery, local Native food fisheries, and Canadian and Alaskan commercial catch levels. The Area 3 fishery is managed for Nass sockeye salmon until mid-July. After mid-July the Area 3 outside fishery is managed for Nass pink and Skeena pink and sockeye stock abundance. The inside fishery is managed for Nass sockeye, pink and chum abundances.

Weekly 1993 hauled catch data by gear type for Areas 3(1-4), 3(7-17), sub-areas 3-11, 3-17 and total Area 3 are presented in Tables 80 to 89. Historical (1963-1992) annual weekly gillnet and seine prorated catch information for sub-areas 3(-1), 3(2-4) and 3(7-17) and for total Area 3 by gillnet and seine are provided in Tables 90 to 113. Annual effort data for Area 3 for years: 1973 - 1992 are shown in Table 79. In addition, annual effort data for these same years for subareas 3(1-4) and 3(7-17) are provided in Table 114.

The 1993 gillnet fishery opened on June 15, followed by the seine fishery, beginning July 17. The season ended on September 7 for gillnets and August 31 for seines. For gillnets there was a total of 43.2 days fishing, while seines fished 15.5 days. The gillnet sockeye catch of 461,845 was high, due to an above average return to the Nass and a good return to the Skeena River as well. The high Area 3 seine catch of 740,195 sockeye also reflected the sockeye abundance.

The catch of pink salmon by gillnets (171,261) and seines (1,888,149) was lower than the forecasted catch of 2.75 million. Of the total Area 3 pink net catch, 59.9 percent (1,233,905) were taken in outside management units 3(1-4). This is less than the pre-treaty (1973-1984) average of 74 percent. The total Area 3 seine effort of 1,656 boat days was higher than the pre-treaty average (1973-1984) of 1,102 boat days. In 1993, 74.2 percent of the total seine effort was expended in management units 3(1-4), which is slightly above the 1973-1984 pre-Treaty average of 68 percent.

Sockeye escapements to the Nass were well above the target of 200,000, with 389,323 past the Meziadin Fishway and a preliminary estimate of 450,000 for all of Area 3. The Nass test fishery underestimated the overall escapement indicating 258,664 past the Nass test fishery. Pink escapements to Area 3 are not yet finalized but early estimates are near target levels, but below recent years. Preliminary chum escapements to Area 3 were good in 1993. Table 115 presents very preliminary escapements for 1993, and Table 116 provides historical annual escapements for Area 3.

Area 4

The Area 4 gillnet fishery opens in late June or early July, and targets on the Skeena sockeye and pink returns. The emphasis for management switches to pink, coho and steelhead in late July after the bulk of the sockeye run is through. In-season abundance is determined by the Skeena test fishery, native food fish catches and commercial catches in Area 4, as well as catches in adjacent Canadian fishing areas and in southern Southeast Alaska.

Area 4 historical weekly catch information by gear type for 1960 - 1993 is provided in Tables 119 - 124. The 1993 gillnet fishery in Area 4 began on June 28, ending on August 23 with 22.3 fishing days (between the 1980-1989 average of 21, and the 1990-1992 average of 27.1). The gillnet effort was higher

than normal (10,909 vs. the 1980-1989 average of 8,728 boats). Seines began fishing on July 23 in Area 4 and continued through to August 16, for a total of 12.0 days fishing. This is greater than the 1980-1989 average of 6.7 days. The seine effort in Area 4 was lower than average (287 vs 347 boat days). In comparison with the 1980-1989 average catches (852,944 for gillnet and 123,231 for seine), the gillnet sockeye catch of 1,452,122 was higher while the seine catch of 123,867 was similar to the average. The gillnet and seine catches of pink salmon were 366,547 and 70,379 respectively, well below the 1980's averages of 701,474 and 273,534.

The preliminary Skeena sockeye escapement estimate of 1.9 million is above the management target of 1 million and the test fishery estimate of 1.35 million. The Skeena pink escapement estimate from the test fishery is 820,000 close to the management target of 1.0 million. Table 115 provides the preliminary 1993 spawning escapements for Area 4 and Table 125 the annual escapements from 1966 to 1992.

Area 5

Management of the Area 5 fishery during July is based on Skeena sockeye abundance with closures to protect depressed local sockeye stocks. In early August, the fishery targets on Skeena pink stocks which use Area 5 as a migration route. In late August fisheries are managed for local pink stocks.

Tables 126 and 127 illustrate the 1993 weekly catch in Area 5 outer (5-10, 5-11 and 5-12) subareas, while Tables 128 and 129 provide weekly total Area 5 catch. Catch information by gear type for 1960-1993 is provided in Tables 130 - 135 for total Area 5. Catch for 1960-1992 is saleslip, while 1993 is based on hail data only.

In 1993, the gillnet fishery in Area 5 began on June 28 in conjunction with the Area 4 gillnet fishery. Seine fishing in Area 5 began on July 17. August 16 was the last day of fishing for both gear types due to concerns for local Area 5 pink stocks. The total sockeye harvest of 16,607 by gillnets and 19,111 by seines was similar to the 1980-1989 averages of 17,228 and 19,252. Total days fishing (21.8 gillnet days, 13 seine days) were similar to the 1980's average (16 gillnet days, 15 seine days), but the fleet size was much lower than the average (183 gillnets, 71 seines vs. 451 gillnets, 203 seines). The total pink catch of 31,122 is well below the 1980's average of 413,607. Of the total Area 5 pink catch 3,191 or 10.4 percent was harvested in Management Units 5-11 and 5-12.

Preliminary 1993 escapement information for Area 5 is provided in Table 115 and annual historical spawning escapements are provided in Table 136.

Area 1 Pink Troll Fishery

The 1993 Area 1 pink troll fishery opened July 1, and concluded September 12 when northern British Columbia was closed to all salmon trolling. The Area 1 pink troll catch in the A-B line strip (Figure 6) was monitored in-season by hailing trollers on the grounds to establish catch rates and by conducting overflights to estimate effort. The A-B line strip was closed to pink trolling July 22 in accordance with

Pacific Salmon Treaty obligations. The A-B line strip catch to July 22 was 264,500 pink salmon, below the ceiling of 300,000. Overall pink troll catches in Area 1 are monitored in-season from effort overflights and shore based sampling procedures. The Area 1 pink troll catch was 889,990. Table 137 illustrates the Area 1 weekly troll catches for 1993 and Table 138 outlines the annual (1973-1993) Area 1 troll catches.

Management Performance Relative to Treaty Requirements

Areas 3 (1-4) and 5-11 Pink Net Catch

Under the Pacific Salmon Treaty the outside portions of Statistical Areas 3 and 5 (Management Units 3-1, 3-2, 3-3, 3-4 and 5-11) are to be managed such that an average annual pink harvest of 900,000 is achieved.

In 1993, 1,237,096 pinks were harvested in Management Units 3(1-4) and 5-10/5-11 combined. Figures 7 and 8 illustrate the pink catch by net gear type for subareas 3(1-4) and total Area 3 from 1973-1992. Figure 9 tracks the proportion of the Area 3 net catch taken from subareas 3(1-4) from 1973 to 1993. Equivalent effort statistics are provided in Figures 9, 10 and 11. The proportion of the catch taken in subarea 3(1-4) during the 1993 season (60 percent) was substantially lower than the pre-Treaty average (1973-84, 74 percent) and similar to the 1985-92 Treaty average of 62 percent. The 1993 gillnet effort in the outer subareas of Area 3, as a proportion of the total Area 3 gillnet effort, was higher than the pre-Treaty average (49 vs 28 percent), but similar to the 1985-1992 average of 47 percent. Seine effort in subareas 3(1-4), as a proportion of total Area 3, was also slightly higher compared to the pre-treaty average (74 vs 68 percent), and similar to the 1985-1992 average of 71%.

Most years since the signing of the Treaty were characterized by exceptionally large pink returns to the Northern Boundary Area. Consequently, the current average annual pink harvest from 1985-1993 in the treaty area (subarea 3(1-4) and 5-10, 5-11, 5-12, 5-13) is 1,991,416. The following table illustrates the catch in these sub-areas:

Year	Annual Harvest 3(1-4)+5(-10,-11,-12)	Average Annual Harvest Since 1985
1985	1,276,647	1,276,647
1986	1,982,814	1,629,731
1987	1,851,424	1,703,628
1988	424,897	1,383,946
1989	2,259,445	1,559,045
1990	830,704	1,437,655
1991	6,960,798	2,226,676
1992	1,098,922	2,085,706
1993	1,237,096	1,991,416

Area 1 Pink Troll Fishery

The Area 1 pink troll fishery is to be managed to an annual ceiling of 1.95 million pinks with a cumulative ceiling of 5.125 million pink salmon for the period 1990-1993. In addition, the area adjacent to the Canada-U.S. boundary in the northern portion of Area 1 (Area 101-4, 101-8 and those portions of 101-3 and 103 north of 54 degrees 37 minutes N. latitude, see Figure 6) closes to pink retention if the pink catch reaches 300,000 in this area, or by July 22, should this sub-ceiling not be met.

Treaty Related Performance

The pink catch in the A-B line area did not reach the 300,000 sub-ceiling and the fishery was closed to pink retention at midnight on July 22, as required. The catch in this area was estimated to be 264,500 pinks. The pink troll fishery continued in the rest of Area 1 until September 12. Preliminary information from saleslips indicate an Area 1 troll catch of 889,990. This brings the cumulative ceiling to a total of 4,467,704 or 657,296 below the 1991-1993 ceiling of 5.125 million. The pattern of total Area 1 weekly pink catch in 1993 is illustrated in Figure 12.

1994 Salmon Forecast Northern British Columbia

Introduction

Expectations and fishing plans for 1994 are still preliminary. Specific opening dates and fishing patterns are determined through consultations with industry and since this process has not yet been completed it is too early to provide details. A summary of the forecasts for Areas 1, 3, 4 and 5 are provided in Table 139.

Area 1 Expectations

Sockeye. There are no significant local sockeye stocks in Area 1. A catch of 50,000 Skeena and Nass sockeye is anticipated.

Pink. Local pink salmon are expected to produce a harvestable surplus of 300,000 in 1994. Passing stocks, particularly Skeena pinks will contribute to the catch as well.

Chum. A very small gillnet assessment fishery is expected in Masset Inlet.

Fishing Plans. A small fishery on Skeena-Nass bound sockeye and the local pink is planned, and management will be based on abundance of these stocks.

Area 3 Expectations

Sockeye. An average sockeye return to Area 3 of 500,000 is expected and should provide for an Area 3 net catch of 280,000. In addition a catch of 200,000 Skeena sockeye is anticipated for a total catch of 480,000. The estimates of Area 3 sockeye returns to Canada are highly uncertain.

Pink. A below recent year average pink return of 600,000 is anticipated, providing an Area 3 catch of 225,000. In addition, 500,000 Skeena pink should be caught in Area 3 net fisheries, for a total catch of 725,000.

Chum. Area 3 chum stocks remain depressed. No targeted catch is anticipated.

Fishing Plans. An above average sockeye fishery and a modest pink fishery are anticipated in Area 3 in 1994.

Area 4 Expectations

Sockeye. The Skeena sockeye return is forecast to be 2,300,000 providing an Area 4 commercial net catch of 1,000,000.

Pink. The Skeena pink return is forecast at 2,300,000. This is below the large returns in recent years. This is expected to provide an Area 4 catch of 600,000.

Chum. Skeena chum escapements are severely depressed and chum are only caught incidentally.

Fishing Plans. In 1994, average sockeye fisheries are forecast for July, while pink salmon fisheries in August are expected to be lower than those in recent odd-year fisheries. Domestic management initiatives to reduce the catch of coho, chum, chinook and steelhead will again be an important factor in 1994 management.

Area 5 Expectations

Sockeye. A catch of approximately 10,000 local sockeye is predicted for Area 5. In addition, a directed fishery on Skeena stocks for a catch of 50,000 sockeye is also anticipated.

Pink. Local Area 5 pink stock forecasts are poor, however, Skeena pinks should offer a catch of 100,000 in Area 5 bringing the total catch to 125,000.

Chum. Local chum stocks are depressed, and no surplus is anticipated.

Fishing Plans. Area 5 fishing patterns will be based largely on the abundance of Skeena sockeye and pink.
