LIST OF APPENDICES

<u>Appendix</u>	<u>Page</u>
A BOUNDARY AREA TROLL CATCH, 1995-1997	A.1.

EXECUTIVE SUMMARY

This report reviews:

- 1) catch, effort, and management actions in the 1997 Northern Boundary Area pink, chum, sockeye, coho, and chinook salmon fisheries of southern Southeast Alaska Districts 101 to 106 and northern British Columbia Areas 1, 3, 4, and 5;
- 2) management performance relative to Treaty requirements;
- 3) historical catches by area, gear (purse seine, gillnet, toll, trap), year, week, and species (sockeye, pink, chum, coho, and chinook salmon);
- 4) historical escapements; and
- 5) preliminary expectations and fishing plans for 1998.

In southern Southeast Alaska, the all-gear salmon harvest of 23.2 million was well below the record harvests in recent years but was still above the 1960-1996 average of 19.5 million fish. The harvest was comprised of 15.3 (65.8%) million pink, 5.3 (23.0%) million chum, 2.0 (8.7%) million sockeye, 0.5 (2.3%) million coho, and 37 (0.02%) thousand chinook salmon. Escapement indices for pink salmon were well distributed and within the goal range except in District 107 where escapements were slightly below goal. Escapements of sockeye, chum, and coho salmon were generally well distributed and at acceptable levels in southern Southeast Alaska.

In Northern British Columbia, pink returns were well below expected levels: 304,163 pink salmon were harvested in the Area 1 net fishery, 420,709 pink salmon were harvested in Canadian Area 3 and 370,966 in the Area 4 fishery. Pink escapements were much lower than expected pre-season and escapements were below target for most Skeena-Nass systems. Sockeye returns were near expected levels, 506,952 were harvested in Area 3 and 955,607 in Area 4. The Nass escapement levels for sockeye were near target. Skeena enhanced stocks were above target levels while wild stocks were variable, at or below escapement targets. Escapements of summer chum salmon were well below target.

For the 1997 fishing season, no agreement had been reached between Canada and the United States on the conduct of the Alaska District 104 purse seine fishery during Statistical Weeks 28-30 (July 6-26). Alaska Department of Fish and Game's management intent was to allow fishermen the opportunity to harvest domestic stocks, to allow for standard fishing periods, to distribute the fishing fleet, and to coordinate purse seine fishing opportunities throughout Southeast Alaska. In order to achieve these objectives, openings in District 104 were based on the observed run strength of southern Southeast pink salmon and the number of vessels fishing in the district. For the 1997 season, fishing time allowed in the district would not exceed the amount of fishing time allowed in District 101, and to the extent possible conform to the 1985-96 average hours fished in District 104 prior to Statistical Week 31. The abundance of sockeye salmon was

exceptionally high in these early weeks and 573,000 sockeye were harvested when the district was opened for portions of 6 days (56 hours total) before Statistical Week 31. The number of hours fished in 1997 was below the 1985-1996 average of 63 hours and well below the 114 hours fished in District 101 during this 3-week period. The catch per effort and early escapements of pink salmon were strong; however, ADF&G managers felt that the high catches of pink, sockeye, and chum salmon would increase the seine effort in District 104 beyond what was needed at that time of the season. Therefore, openings in Statistical Weeks 29 and 30 were shortened relative to openings in other seine areas to discourage effort in this district. In addition, District 104 was not opened when Districts 101, 102, and other seine districts were opened for 15-hours on July 24th.

In the Alaska District 101-11 (Tree Point) gillnet fishery the Pacific Salmon Treaty calls for an average annual harvest, beginning in 1985, of 130,000 sockeye salmon. In Weeks 27 and 29 fishing time at Tree Point was reduced to three days in response to below average returns of chum salmon to Portland Canal and sockeye salmon to the Nass River. In Weeks 30 and 31 the lower portion of Tree Point was closed during a 24-hour extension due to conservation concerns for Nass River sockeye. The fishery was managed according to the Pink Salmon Management Plan from Week 30 through Week 35. During this time period harvests of chum and sockeye salmon were generally above Treaty averages and harvests of pink and coho salmon were below average. Effort levels were low throughout the season. The 1997 harvest of sockeye salmon at Tree Point was 169,474 fish. This brings the 1985 to 1997 average to 168,442 sockeye.

Under the Pacific Salmon Treaty the outside portions of Canada's Statistical Areas 3 and 5 are to be managed such that an average annual pink harvest of 900,000 is achieved. In 1997, 348,373 pinks were harvested in Management Units 3(1-4). The current average annual pink harvest from 1985-1997 in the treaty area is 1,759,170.

As for Alaska's District 104 seine fishery, there were no specific annex arrangements under the Pacific Salmon Treaty governing the conduct of the Canadian Area 1 troll fishery for pink salmon. Preliminary saleslips indicate the Area 1 troll catch was 263,650 pinks with 187,000 taken in the A-B line strip.

Strong harvests are forecasted for Southeast Alaska pink salmon in 1998. The Alaska Department of Fish and Game forecasts a harvest of between 36 and 50 million pink salmon in all of Southeast Alaska in 1998. Separate forecasts for northern and southern Southeast are no longer made. Returns of coho, sockeye, and chum salmon are projected to be strong, comparable to the levels observed in recent years.

In Canada, average Nass sockeye returns and very poor Skeena sockeye returns are anticipated in 1998, while above average pink returns are predicted.

INTRODUCTION

This report reviews the 1997 Boundary Area pink, chum and sockeye salmon fisheries of southern Southeast Alaska and Northern British Columbia and outlines preliminary expectations and fishing plans for 1998. The document is submitted to the Pacific Salmon Commission as required in Article IV of the Pacific Salmon Treaty. Weekly catch and effort data is provided by district/area, gear, and species (sockeye, pink, chum, coho, and chinook) for Northern Boundary Area fisheries from 1960 to 1997. Sub-area catch data is also presented for sockeye, pink and chum salmon for Canadian Areas (3-1), 3(2-4) and 3(7-17). Canadian catch data for 1997 is based on hail surveys as saleslip data is preliminary at this time.

Maps showing the statistical fishing districts/areas for Southeast Alaska and Northern British Columbia are provided in Figures 1 to 5.

SOUTHERN SOUTHEAST ALASKA

1997 Salmon Forecast

Formal forecasts are not made for species of salmon other than pink salmon in Southeast Alaska. Alaska Department of Fish and Game (ADF&G) forecasted a strong harvest of 26 to 48 million pink salmon in all of Southeast Alaska in 1997. This forecast was supported by results from ADF&G's regression model, which uses brood year escapement indices and winter air temperatures as independent variables, as well as management and fleet observations. Returns of sockeye, chum, and coho salmon were projected to be good, comparable to the levels observed in recent years. A strong return of McDonald Lake sockeye was forecast.

Review of the 1997 Fishing Season

Commercial fisheries harvested approximately 23.2 million salmon in southern Southeast Alaska in 1997, this includes purse seine, drift gillnet, troll, and hatchery harvests from Districts 101 to 108, 150 and 152, and the salmon harvests in the Annette Island Fishery Reserve.

This harvest is above the average since statehood (1960-1996) of 19.5 million. The harvest was comprised of 15.3 (65.8%) million pink, 5.3 (23.0%) million chum, 2.0 (8.7%) million sockeye, 0.5 (2.3%) million coho, and 37 (0.2%) thousand chinook salmon. Historical catch and effort data by district, gear, species, and week is presented in Tables 1-66.

The pink salmon harvest in all of Southeast Alaska of 29.0 million was well below the 10-year (1987-1996) average harvest but just within with the preseason forecast of 26 to 48 million. The majority of purse seine boats did not fish during the initial opening in Statistical Week 31 due to a price dispute with processors and this may have reduced the catch of all species somewhat.

District 104 Purse Seine Fishery

For the 1997 season, no agreement had been reached between Canada and the U.S. on the conduct of Alaska's District 104 purse seine fishery. Alaska Department of Fish and Game's management intent was to allow fishermen the opportunity to harvest domestic stocks, to allow for standard fishing periods, to distribute the fishing fleet, and to coordinate purse seine fishing opportunities throughout Southeast Alaska.

In order to achieve these objectives, openings in District 104 were based on the observed run strength of southern Southeast pink salmon and the number of vessels fishing in the district. For the 1997 season fishing time allowed in the district would not exceed the amount of fishing time allowed in District 101, and to the extent possible conform to the 1985-96 average hours fished in District 104 prior to Statistical Week 31.

In 1997 there were three weeks of fishing prior to Statistical Week 31. By State of Alaska regulation, the District 104 purse seine season began on July 6 (Statistical Week 28) with a 15 hour opening. During this opening 65 boats harvested 137,900 pink, 72,400 sockeye, 47,700 chum, and 3,900 coho salmon. A second opening of 15 hours was allowed on July 9 and 78 boats harvested 220,900 pink, 130,000 sockeye, 94,700 chum and 6,100 coho salmon.

Although pink salmon Catch Per Unit of Effort (CPUE) and early season pink salmon escapement were at high levels the department felt that the high catches of pink, sockeye, and chum salmon would increase the effort in the district beyond what was needed at that time of the season. Therefore, during the first opening of Statistical Week 29 the fishing time was reduced to 8 hours in District 104 while inside districts were open for 15 hours. During that opening on July 13, 114 boats harvested 181,500 pink, 88,900 chum, 73,300 sockeye, and 1,600 coho salmon.

Management continued to discourage seine effort in District 104 for the remainder of the time prior to Statistical Week 31. Six-hour openings were allowed in District 104 on July 16, 20, and 21 while inside districts were open for 15 hours on July 16, 39 hours on July 20-21, and 15 hours on July 24. During these openings in District 104 a total of 1,136,000 pink, 297,000 sockeye, 242,000 chum, and 10,000 coho salmon were caught. Effort ranged from a low of 61 boats on July 20 to a high of 137 purse seine boats on July 21. The District 104 purse seine fishery did not open on July 24, the date of the last general seine opening in Statistical Week 30.

Thus, in 1997, in District 104 pre-Statistical Week 31, 1,676,000 pink, 573,000 sockeye, 473,000 chum and 21,000 coho were harvested. District 104 was opened a total of 56 hours in Weeks 28-30 compared to the 1985-1996 average of 63 hours. District 101 was opened for 114 hours during this pre-Week 31 period in 1997.

By late July pink salmon returns to the inside waters of southern Southeast Alaska were not as strong in some areas as in recent years. In order to pass fish into the inside waters, and into the escapement, District 104 was only opened for two fifteen-hour periods in Statistical Week 31. The inside waters were opened for a fifteen and a thirty-nine hour opening. During these two fifteen hour openings in District 104,

1,611,000 pink, 253,000 sockeye, 106,000 chum, 17,000 coho were harvested. On the Monday, July 28 opening 172 boats fished and on the Friday, August 1 opening 146 purse seine vessels fished in the district.

During the initial 39-hour opening in Statistical Week 32 the majority of purse seine boats in the region did not fish due to a price dispute with the processors. Effort in District 104 was only 28 boats but these boats caught 510,000 pink salmon or approximately 18,215 pinks-per-boat. For the next three openings the district was managed on a 2-day-on/2-day-off fishing schedule. Catches in District 104 diminished as August progressed. The final District 104 fishery of fifteen hours occurred on August 21. This was the earliest closure of the fishery since 1987.

A total of 5.5 million pink salmon were caught in District 104 during the 1997 season. This represents 36% of the 15.3 million pink salmon harvested in southern Southeast Alaska. District harvests also totaled 1,245,000 sockeye, 685,000 chum, 63,000 coho, and 2,700 chinook salmon.

Districts 101, 102, and 103 Purse Seine Fisheries

With the exception of a sockeye salmon fishery in upper West Behm Canal which targeted sockeye salmon returning to McDonald Lake, the southern Southeast Alaska inside purse seine fishery was managed on the strength of pink salmon returns to Districts 101 through 107. The 1997 purse seine fishery in southern Southeast Alaska was characterized by below average returns of pink salmon to most areas. Distribution of the return was also highly uneven. During a 39 hour opening on July 28 the vast majority of purse seine permit holders did not fish due to a price dispute with the cannery processors.

The District 101 purse seine fishery opened for 15 hours on July 6 (Statistical Week 28). During that opening 15 boats caught 25,800 pink salmon. For the next three openings, through July 16 District 101 was opened for three 15 hour openings. Catches of pink salmon were well below average during these openings. Effort levels were also very low as only 6 to 15 boats participated. However, escapement levels to most early run pink systems in Behm Canal and Boca de Quadra were good. On July 20, District 101 was opened for 39 hours; however catches remained low, and the next two openings on July 24 and on July 28 were only for fifteen hours.

Beginning on August 1 (Statistical Week 31) District 101, along with the other inside districts, was opened for 2 day on/2 day off fishing schedule through August 18. Both catches and effort remained very low in District 101. Little or no effort was observed in the traditional purse seining areas near the entrance of Boca de Quadra or at Point Alava and Point Sykes near East Behm Canal. Starting with the July 20 opening, most purse seine effort in District 1 was along the Gravina Island shore. The season came to a close after a 15-hour opening on August 25.

In 1997, there were three openings to target McDonald Lake sockeye salmon in upper West Behm Canal. During these three openings, each for 15 hours on July 24, July 28, and August 1, approximately 35,000 McDonald Lake sockeye were harvested by 50 purse seine vessels. McDonald Lake had an escapement of approximately 66,000 sockeye which is just below the lower end of the escapement range.

For the season, 1,320,000 pink, 263,000 chum, 106,000 sockeye, and 10,000 coho salmon were harvested in District 101. The pink salmon escapement index was 2.5 million fish which is the mid-point of the index goal range for the district.

District 102 purse seining began on July 9 (Statistical Week 28) with a 15 hour opening. As in District 101 the harvest of pink salmon, along with purse seine effort levels, were well below recent year's averages. Summer chum catches in lower District 102 were high, mostly due to the contribution of enhanced fish returning to Southern Southeast Regional Aquaculture Association's remote release site at Kendrick Bay. Even with lower than average pink salmon catches by early August escapement levels of pink salmon into Kasaan Bay and Cholmondeley Sound were at very high levels so most of the Clarence Strait shoreline of District 102 was open to seining. It became apparent by early August that a significant portion of District 102 pink salmon returns were entering the district from the north through Sumner Strait and upper Clarence Strait. This was evident by the above average pink catches in the District 106 purse seine and gillnet fisheries. During the last opening of the year in District 102 most of the effort and harvest came from the upper portion of the district.

For the season, 1,313,000 pink, 567,400 chum, 54,400 sockeye, and 14,600 coho were harvested in District 102. The pink salmon index escapement of 815,000 fish is slightly above the index goal of 800,000.

The District 103 purse seine fishery was opened for an initial 15 hour fishing period on July 28 (Statistical Week 31); however, no boats delivered fish from the district. For the remainder of August, the District 103 fishery experienced below average catches of pink salmon. Escapement levels in some of the more productive District 103 systems such as Nutkwa Creek, Trocedero Bay, and Klawock River were well below those seen in recent years. The peak harvest in the district occurred during the opening of August 13 when 41 boats harvested approximately 230,000 pink salmon.

For the season, 833,000 pink, 30,000 sockeye, 17,000 chum, and 8,500 coho were harvested in District 103. The pink salmon escapement index of 2,042,000 fish is close to the 2,100,000 mid-point of the escapement goal range.

Tree Point Drift Gillnet Fishery

The Tree Point drift gillnet fishery opens by regulation on the third Sunday of June. During the early stages of the fishery, management is based on the run strength of Alaska wild stock chum and sockeye salmon and on the strength of the Nass River sockeye salmon. Beginning in the third week of July, when pink salmon stocks begin to enter the fishery in large numbers, management emphasis shifts by regulation to that species. The District 101 Pink Salmon Management Plan sets gillnet fishing time at Tree Point in relation to the District 101 purse seine fishing time when both fleets are concurrently harvesting the same pink salmon stocks. The U.S./Canada Pacific Salmon Treaty calls for an average annual harvest of 130,000 sockeye salmon.

In 1997, the gillnet fishery at Tree Point was opened for a 4-day fishing week on June 15 (Week 25). Catches of both sockeye and chum salmon were below average since the signing of the Treaty as was the effort level. During a four day fishing week in Statistical Week 26 catches of chum salmon remained low while the sockeye salmon harvest increased. Eighty-seven gillnet vessels fished which is below the 1985-1996 Treaty average of 108 boats.

For two out of the next three weeks fishing time at Tree Point was reduced to three days in response to below average returns of chum salmon to Portland Canal and sockeye salmon to the Nass River. Effort levels also remained low.

The fishery was managed according to the Pink Salmon Management Plan from Week 30 through Week 35. From Week 30 through Week 34 Tree Point was opened for five days, in Week 35 Tree Point was opened for 3 days. During this time period the harvest of chum and sockeye salmon were generally above Treaty averages and harvests of pink and coho salmon were below average. Effort levels remained well below average.

In Weeks 30 and 31 the lower portion of Tree Point was closed during a 24-hour extension due to conservation concerns for Nass River sockeye. At that time the Nass River escapement was projected to be approximately 150,000 sockeye, with a goal of 200,000 sockeye. Total escapement of sockeye salmon into the Nass River was estimated to be 239,000 fish as of August 24, 1997.

Starting on August 31 (Week 36) and continuing through the close of the fishery on September 16 (Week 34), the fishery was managed on the strength of the fall chum and coho returns. While chum catches were above average, coho catches were below average. Only 2-day fishing periods were allowed over this time period. Approximately 60 boats fished on a weekly basis during the final three weeks of the Tree Point season.

A total of 169,474 sockeye salmon were harvested in the District 101 drift gillnet fishery in 1997. This brings the 1985-1997 average annual harvest of sockeye salmon to 168,442.

Pink, Sockeye, Chum, and Coho Salmon Escapements

Pink salmon escapement indices totaled 7.2 million, just below the mid-range goal of 7.6 million, and were generally well distributed throughout southern Southeast Alaska in 1997 (Table 67). Escapement indices were within the escapement goal ranges in all districts except District 107 where index escapements were just below goal.

Programs to estimate escapements of sockeye salmon are only in place for two systems in southern Southeast Alaska, Hugh Smith and McDonald Lakes (Table 68). The sockeye escapement to Hugh Smith Lake was 12,182 based on weir counts. The informal escapement goal for Hugh Smith is 27,000 sockeye salmon. The production of sockeye in this lake is enhanced with back-planted fry. The escapement of sockeye salmon into McDonald Lake was estimated to be 65,771 based on expanded foot surveys. The

informal goal range is 70,000 to 85,000 salmon. While below goals both Hugh Smith and McDonald Lake escapements were above those in recent years. The return of sockeye salmon to McDonald Lake in 1997 was reasonably strong. Approximately 35,000 McDonald Lake sockeye were harvested in a directed seine fishery in Yes Bay.

Escapements of summer- and fall-run chum salmon were generally well distributed and at acceptable levels in southern Southeast Alaska. However, escapements were well below the record number observed in 1996. The escapement of chum salmon into Fish Creek at the head of Portland Canal was the lowest on record (Table 69).

Aerial and foot surveys for coho salmon indicated escapements were within acceptable ranges throughout southern Southeast Alaska. The Ketchikan area coho escapement index of 5,143 was the second lowest since the index program began in 1987. Only the early pre-peak survey was conducted as weather conditions after early October prevented personnel from conducting an effective peak survey. The escapement to Hugh Smith Lake was 732 which, although the third lowest estimate since 1982, was within the goal range.

Coded Wire Tag Releases

Coded wire tag mark-recovery programs provide information on migration routes and fishery contributions for hatchery and wild stocks in Southeast Alaska. Preliminary releases of coded wire tagged salmon in Southeast Alaska in 1997 are listed in Table 70.

Management Performance Relative to Treaty Requirements

District 104 Purse Seine Fishery

For the 1997 fishing season, no agreement had been reached between Canada and the United States on the conduct of the Alaska District 104 purse seine fishery prior to Statistical Weeks 31. The annex limiting the catch of sockeye salmon pre-Week 31 in District 104 expired in 1993.

Alaska Department of Fish and Game's management intent was to allow fishermen the opportunity to harvest domestic stocks, to allow for standard fishing periods, to distribute the fishing fleet, and to coordinate purse seine fishing opportunities throughout Southeast Alaska. In order to achieve these objectives, openings in District 104 were based on the observed run strength of southern Southeast pink salmon and the number of vessels fishing in the district. For the 1997 season, fishing time allowed in the district would not exceed the amount of fishing time allowed in District 101, and to the extent possible conform to the 1985-96 average hours fished in District 104 prior to Statistical Week 31.

The abundance of sockeye salmon was exceptionally high in these early weeks and 573,000 sockeye were harvested when the district was opened for portions of 6 days (56 hours total) before Statistical Week 31. The number of hours fished in 1997 was below the 1985-1996 average of 63 hours and well below the 114 hours fished in District 101 during this 3-week period. The catch per effort and early escapements of pink salmon were strong; however, ADF&G managers felt that the high catches of pink, sockeye, and chum salmon would increase the seine effort in District 104 beyond what was needed at that time of the season. Therefore, openings in Statistical Weeks 29 and 30 were shortened relative to openings in other seine areas to discourage effort in this district. In addition, District 104 was not opened when Districts 101, 102, and other seine districts were opened for 15-hours on July 24th.

The average number of hours, days, and boat-days fished pre-Week 31 in years 1985-1997 is down 33 to 68% compared to the 1980-1984 period. The sockeye harvest is also down 10% despite an increase in sockeye availability in recent years; the average sockeye catch-per-boat-day has increased 219% since 1984. Fishing opportunity, effort, and sockeye harvests prior to Week 31 in the District 104 purse seine fishery.

Year	Hours Fished	Days Fished (1d=1+hr)	Fraction Days Fished (1d=15hr)	Boat-Days Fished (Fraction Boats and Fraction Days)	Sockeye Harvest	Sockeye Catch/Boat-Day (Cumulative Weeks. 28-30)

District 101 Tree Point Drift Gillnet Fishery

The Treaty calls for an average annual harvest of 130,000 sockeye salmon in the Tree Point gillnet fishery. The preliminary estimate of total sockeye harvest in 1997 is 169,474 fish.

Year	Annual Harvest	Avg. Ann. Harvest
1985	172,863	172,863
1986	145,657	159,260
1987	107,595	142,038
1988	116,240	135,589
1989	144,936	137,458

1991	131,492	129,210
1992	244,649	143,640
1993	394,098	171,469
1994	100,377	164,360
1995	164,277	164,352
1996	212,403	168,356
1997	169,474	168,442

1998 Salmon Forecast for Southern Southeast Alaska

The 1998 pink salmon return to Southeast Alaska is expected to be strong. The Alaska Department of Fish and Game's preliminary forecast is for a harvest of between 36 and 50 million pink salmon in all of Southeast Alaska in 1998. This harvest interval is supported by the results from a regression model, which uses brood year escapement indices and winter air temperatures as independent variables, and management and fleet field observations.

Formal forecasts are not made for species other than pink salmon in Southeast Alaska. However, returns of coho, sockeye, and chum salmon are projected to be good, comparable to the levels observed in recent years. There should be a strong return of sockeye salmon to McDonald Lake again in 1998.

NORTHERN BRITISH COLUMBIA

1997 Salmon Forecast

Area 1 Expectations

Sockeye. There are no significant local sockeye stocks in Area 1.

Pink. Off year for QCI pink salmon.

Chum. A small gillnet assessment fishery was expected in Masset Inlet.

Area 3 Expectations

Sockeye. An average sockeye return to Area 3 of 535,000 was expected to provide an Area 3 net catch of 285,000. In addition a catch of 500,000 Skeena sockeye was anticipated for a total catch of 785,000.

Pink. A low Nass pink return of 700,000 was expected to provide an Area 3 catch of 350,000. In addition, 1,000,000 Skeena pink were expected to be caught in Area 3 net fisheries, for a total catch of 1,350,000 Skeena-Nass pink.

Chum. Area 3 chum stocks appear to be improving but still remain at or below target levels. Little or no targeted fishing was anticipated.

Fishing Plans. An average sockeye fishery and pink fishery was anticipated in Area 3 in 1997.

Area 4 Expectations

Sockeye. The Skeena sockeye return was forecast to be 3,000,000 to Canadian waters providing an Area 4 commercial net catch of 1,050,000.

Pink. The Skeena pink return was forecast to be 3,400,000 which is well below average due to low brood year escapements. This was expected to provide an Area 4 catch of 1,000,000.

Chum. Skeena chum escapements are severely depressed and chum are only caught incidentally.

Fishing Plans. Once again, the key factors in developing the 1997 management plans were domestic management initiatives to maintain or increase the sockeye harvest while reducing the catch of coho and steelhead.

Area 5 Expectations

Sockeye. A catch of approximately 15,000 local sockeye was predicted for Area 5. In addition, a directed fishery on Skeena stocks for a catch of 100,000 sockeye was also anticipated.

Pink. Local Area 5 pink and Skeena pink stock forecasts were poor which was anticipated to result in a below average catch of about 290,000.

Chum. Local chum stocks are depressed, and no surplus was anticipated.

Fishing Plans. Area 5 fishing patterns were based largely on the abundance of Skeena sockeye and pink.

Review of 1997 Fishing Season - Net and Troll Fisheries

Area 1

The Area 1 net fishery can be separated into two distinct fisheries. The fishery on passing stocks (July to mid-August) is concentrated in the Langara Island region off the Northwest corner of the Queen Charlotte Islands. This is predominantly a seine fishery harvesting passing sockeye and pink salmon bound mainly for the Skeena River. Nass, Fraser and Southern Southeast Alaskan stocks are also caught incidentally. The second fishery (mid-August to October) concentrated in Masset Inlet and Naden Harbour is a gillnet and seine fishery for surplus local chum and even-year pink stocks. The weekly 1997 catch statistics for Area 1 gillnet and seine fisheries are provided in Tables 71 and 72. Effort data is expressed in the number of boats fishing during each opening, the hours fished, and the portion of 24-hour days represented by the hours fished.

Area 1 historical (1960-1997) weekly net catch data for passing and local stocks is outlined in Tables 73-82. Effort data is provided for years 1973-1997 in Table 83. A map of the local management subareas is included (Figure 4).

The Area 1 gillnet fishery was open for a total of 26 days between June 25 and July 29, with catches totalling 107,136 sockeye and 40,656 pink. The Area 1 seine fishery was open for a total of 16 days (hours per day varied between 4 and 13) between July 13 and July 29 with catches totalling 248,186 sockeye and 263,507 pink.

The terminal area pink fishery was not open in 1997 as this is an odd year stock only. The terminal area chum fishery operated for a total of 6 days between September 8 and 17 for a modest catch of 175 chum.

Weekly troll catch data for Area 1 sockeye, pink, chum, chinook and coho for 1995-1997 are provided in Appendix A, Tables A-7 to A-11.

Area 3

Management units (sub-areas) of Statistical Area 3 are outlined in Figure 5. In recent years, the Area 3 sockeye gillnet fishery has started in mid June. From 1963 to 1993 in-season escapement was determined by the Nass River gillnet test fishery. Since 1994 the decision was made to rely on escapement estimates provided by the Nisga'a fishwheel operations conducted in the lower Nass River approximately five miles upstream from the old Nass test fishery site. In addition to the fishwheel estimates, catches in local Native food fisheries, and Canadian and Alaskan commercial fisheries were utilised in determining Nass sockeye run strength.

In general the Area 3 net fishery is managed for Nass sockeye salmon until mid-July after which the outer Area 3 fishery is managed based on Nass and Skeena pink and Skeena sockeye stock abundance. The inside Area 3 net fishery is managed for Nass sockeye, pink and chum abundance's from mid-July to late August or early September.

Weekly 1997 hauled catch data by gear type for Areas 3(1-4), 3(7-17), sub-areas 3-11, 3-17 and total Area 3 are presented in Tables 84 to 91. Prorated historical (1963-1997) weekly catch information for gillnets and seines in sub-areas 3(-1), 3(2-4) and 3(7-17) and total Area 3 are provided in Tables 95 to 121. Annual effort data for Area 3 for the years: 1973-1997 are shown in Table 83. In addition, annual effort data for these same years for subareas 3(1-4) and 3(7-17) are provided in Table 122.

The 1997 gillnet and seine fisheries opened on June 10 and July 13 respectively. The season ended on July 31 for gillnets and August 12 for seines. For gillnets there was a total of 23.0 days fishing, while seines fished 15.8 days. The gillnet and seine sockeye catches of 242,946 and 264,006 were below expected levels. The catch of pink salmon by gillnets (41,186) and seines (379,253) was well below the anticipated harvest as returns to Canada were much weaker than anticipated. Of the total Area 3 pink net catch, 82.8 percent (348,373) was taken in outside management units 3(1-4). This is above the pre-treaty (1973-1984) average of 74 percent. The total Area 3 seine effort of 809 boat days is well below the pre-treaty average (1973-1984) of 1,102 boat days. In 1997, 83.8 percent of the total seine effort was expended in management units 3(1-4), which is well above the 1973-1984 pre-Treaty average of 68 percent.

Sockeye escapements to the Nass were at or above target for most stocks with 158,218 past the Meziadin Fishway and a very preliminary estimate of 237,000 for all of Area 3.

Pink escapements to Area 3 totalled 225,000 and were variable at or below target levels. Preliminary chum escapements to Area 3 were poor in 1997. Table 123 presents very preliminary escapements for 1997 and Table 124 provides historical annual escapements for Area 3.

Weekly troll catch data for Area 3 sockeye, pink, chum, chinook and coho for 1995-1997 are provided in Appendix A, Tables A-7 to A-11.

Area 4

The 1997 fishing plan was again developed to maximise sockeye harvest while addressing concerns for Skeena coho and steelhead stocks. In-season abundance is determined by the Skeena test fishery, harvest rate and CPUE models, native food fish catches and commercial catches in Area 4 and other fishing areas in northern BC and in southern Southeast Alaska.

Summaries of the 1997 gillnet and seine weekly catch and effort are provided in Tables 125 and 126. Area 4 historical weekly catch information by gear type for 1960-1997 is provided in Tables 127-136.

The Area 4 fishery began on June 17 and continued through to July 31 with a total of 20.7 fishing days for gillnets. The number of gillnet boat days was less than recent years with a total of 9,558 in 1997 (the 1990 to 1996 average was 10,887). The regular seine fishery in Area 4 occurred between July 19 and July 27 for a total of 6 seine fishing days. Additional seine opportunities were provided between July 28 and August 12 (eight 12 to 14 hour fisheries) in terminal areas of the Skeena with retention of sockeye and pink only. The seine fleet fished a total of 172 boat days, 116 of these in the selective seine fishery.

The total gillnet catch of sockeye was 838,824 while the pink catch was 201,536. The seine harvest totalled 116,783 sockeye and 167,705 pink, with 90% of the sockeye and 95% of the pinks harvested during the selective fishery.

The preliminary Skeena sockeye escapement estimate of 978,000 million is slightly above the spawning target of 0.9 million. Wild stocks are generally below target with the enhanced Babine stocks exceeding escapement targets. The Skeena pink escapement estimate is 500,000 well below the minimum escapement target of 1.0 million. Table 123 provides the preliminary 1997 spawning escapements for Area 4 and Table 137 the annual escapements from 1966 to 1997.

Weekly troll catch data for Area 4 sockeye, pink, chum, chinook and coho for 1995-1997 are provided in Appendix A, Tables A-7 to A-11.

Area 5

Management of the Area 5 fishery during July is based on Skeena sockeye abundance with closures to protect depressed local sockeye stocks. From late July to early August, the fishery targets Skeena pink stocks which use Area 5 as a migration route. In mid to late August, fisheries are managed for local pink stocks.

Tables 138 and 139 provide the weekly total Area 5 catch and effort for 1997. Catch information by gear type for 1960-1997 is provided in Tables 140-149 for total Area 5.

In 1997, the gillnet fishery in Area 5 began on June 24 and finished July 31. Seine fishing in Area 5 began on July 13 and ended August 5. Total days fishing were 20.0 gillnet days and 13.0 seine days. The 25 seine boat days and 269 gillnet days were below recent averages.

The total sockeye harvest of 22,524 by gillnets and 1,349 by seines are both well below recent averages. The total pink harvest of 5,690 by gillnets and 4,761 by seines are also both well below recent averages.

Preliminary 1997 escapement information for Area 5 is provided in Table 123 and historical spawning escapements are provided in Table 150.

Weekly troll catch data for Area 5 sockeye, pink, chum, chinook and coho for 1995-1997 are provided in Appendix A, Tables A-7 to A-11.

Area 1 Pink Troll Fishery

The 1997 Area 1 pink troll fishery opened July 1, and was closed September 1 when the northern areas were closed for coho conservation. A portion of Area 1 (Subareas 1-2, 1-7, 101-3, 101-6 and a portion of 101-7) were opened to provide chinook harvest opportunities September 9 and closed October 31. Other area 1 and 2W areas adjacent to the Queen Charlotte Islands were open for species other than pink salmon. The Area 1 pink troll catch in the A-B line areas strip (Figure 6) was monitored in-season by hailing trollers on the grounds to establish catch rates and by conducting overflights to estimate effort. The A-B line area catch estimate for the season was 187,000 pink salmon. Overall pink troll catches in Area 1 are monitored in-season from effort overflights and shore based sampling procedures. The Area 1 pink troll catch was 263,650. Table 151 illustrates the Area 1 weekly troll catches for 1997 and Table 152 outlines the annual (1973-1997) Area 1 troll catches.

Management Performance Relative to Treaty Requirements

Areas 3 (1-4) and 5-11 Pink Net Catch

Under the Pacific Salmon Treaty the outside portions of Statistical Areas 3 and 5 (Management Units 3-1, 3-2, 3-3, 3-4 and 5-11) are to be managed such that an average annual pink harvest of 900,000 is achieved.

In 1997, 348,373 pinks were harvested in Management Units 3(1-4). Records of catch in the outer subareas of Area 5 were not kept in 1997 because of the fiscal constraints. Figures 6 and 7 illustrate the pink catch by net gear type for subareas 3(1-4) and total Area 3 from 1973-1997. Figure 8 tracks the proportion of the Area 3 net catch taken from subareas 3(1-4) from 1973 to 1997. Equivalent effort statistics are provided in Figures 9, 10 and 11. The proportion of the catch taken in subarea 3(1-4) during the 1997 season (83 percent) was higher than the pre-Treaty average (1973-84, 73 percent). The 1997 proportion of gillnet effort in the outer subareas of Area 3 (71 percent), was substantially higher than the pre-Treaty average (27 percent). Seine effort in subareas 3 (1-4), as a proportion of total Area 3, was 86 percent in 1997 which is higher than the pre-treaty average of 68 percent.

The current average annual pink harvest from 1985-1997 in the treaty area (subarea 3(1-4) and 5-10, 5-11, 5-12, 5-13) is 1,694,737. The following table illustrates the catch in these sub-areas:

Year	Annual Harvest 3(1-4)+5(-10,-11,-12)	Average Annual Harvest Since 1985
1985	1,276,647	1,276,647
1986	1,982,814	1,629,731
1987	1,851,424	1,703,628
1988	424,897	1,383,946
1989	2,259,445	1,559,045
1990	830,704	1,437,655
1991	6,960,798	2,226,676
1992	1,098,922	2,085,706
1993	1,314,130	1,999,976
1994	286,032	1,828,581
1995	3,126,124	1,946,540
1996	1,108,897	1,876,736
1997	348,373	1,759,170

Area 1 Pink Troll Fishery

There was no specific arrangement for the Area 1 troll fishery in 1997. Preliminary information from saleslips indicate an Area 1 pink troll catch of 263,650. The pattern of total Area 1 weekly pink catch in 1997 is illustrated in Figure 12.

1998 Salmon Forecast Northern British Columbia

Introduction

Expectations and fishing plans for 1998 are still preliminary. Specific opening dates and fishing patterns are determined through consultations with industry and since this process has not yet been completed it is too early to provide details. A summary of the forecasts for Areas 1, 3, 4 and 5 are provided in Table 153.

Area 1 Expectations

Sockeye. There are no significant local sockeye stocks in Area 1.

Pink. A large pink surplus is anticipated for Masset Inlet.

Chum. A small gillnet assessment fishery is expected in Masset Inlet.

Fishing Plans. The fishing plans for net fisheries on passing stocks have not been established.

Area 3 Expectations

Sockeye. An average sockeye return to Area 3 of 500,000 is expected to provide an Area 3 net catch of 250,000. In addition a catch of 25,000 Skeena sockeye is anticipated for a total catch of 275,000.

Pink. A Nass pink return of 800,000 is expected to provide an Area 3 catch of 450,000. In addition, 300,000 Skeena pink are expected to be caught in Area 3 net fisheries, for a total catch of 750,000 Skeena-Nass pink.

Chum. Area 3 chum stocks remain below target levels. No targeted fishing is anticipated.

Fishing Plans. An very modest sockeye and pink fishery are anticipated in Area 3 in 1998.

Area 4 Expectations

Sockeye. The Skeena sockeye return is forecast to be 1,150,000 to Canadian waters providing an Area 4 commercial net catch of 100,000.

Pink. The Skeena pink return to Canadian waters is forecast to be 3,100,000. This is expected to provide an Area 4 catch of 500,000.

Chum. Skeena chum escapements are depressed and chum are only caught incidentally.

Fishing Plans. Domestic management initiatives to respond to coho conservation concerns and a poor sockeye return will be the key factors in developing 1998 management plans.

Area 5 Expectations

Sockeye. A catch of approximately 20,000 local sockeye is predicted for Area 5. A fishery on Skeena stocks for a catch of 12,500 sockeye is also anticipated.

Pink. Local Area 5 pink and Skeena pink stock forecasts are good which should result in catch of about 510,000.

Chum. Local chum stocks are depressed, and no surplus is anticipated.

Fishing Plans. Area 5 fishing patterns will be based largely on the abundance of Skeena sockeye and pink.

^a Spawning escapement equals total escapement minus egg take and/or weir mortalities.

^b Un-validated weir count.

^c Expanded foot survey count.

^d Mark-recapture estimate. Returning adults were marked at the weir and recovered in Buschmann and Cobb Creeks. Actual weir counts were 2,312 in 1986, 65,737 in 1992, 11,312 in 1993, 8,386 in 1994, and 3,422 in 1995.

^e Weir count validated by backup mark-recapture estimate.

^a A total of 9,916 chum salmon were counted through a weir on Fish Creek in 1991, 46,771 in 1992, 60,447 in 1993, 32,322 in 1994, and 9,742 in 1995.

^b The total escapement of chum salmon into Marx Creek was estimated using area-under-the-curve methods to be 17,597 in 1992, 36,303 in 1993, 9,535 in 1994, and 1,003 in 1995.

COMPILED TO DECEMBER, 1997.

TABLE 153

DEPARTMENT OF FISHERIES AND OCEANS

COMMERCIAL NET SALMON FORECAST - 1998

AREAS 1,3,4 AND 5

		FORECAST RETURNS TO		CATCH OF AREAS		CATCH OF OTHER AREAS		TOTAL CATCH IN AREA
		CANADA	EXPECTED ESCAPEMENT	PRODUCTION		PRODUCTION		
AREA 1	Sockeye	N/A	N/A	0		12,500 Skeena		12,500
	Pink	2,200,000	1,000,000	1,200,000		100,000 Skeena		1,300,000
AREA 3	Sockeye	500,000	250,000	250,000		25,000 Skeena		275,000
	Pink	800,000	350,000	450,000		300,000 Skeena		750,000
AREA 4	Sockeye	1,150,000	1,000,000 *	100,000		0		100,000
	Pink	3,100,000	2,000,000	500,000		0		500,000
AREA 5	Sockeye	60,000	40,000	20,000		12,500 Skeena		32,500
	Pink	560,000	250,000	310,000		200,000 Skeena		510,000

Sockeye: Skeena total catch 150,000

Pink: Skeena total catch 1,100,000

1998 expectations are very preliminary at this time.

*Area 4 escapement includes IFF requirements.
